Fixed Income Modelling offers a unified presentation of dynamic term structure models and their applications to the pricing and risk management of fixed income securities. It explains the basic fixed income securities and their properties and uses, as well as the relations between those securities. The book presents and compares the classical affine models, Heath-Jarrow-Morton models, and LIBOR market models, and demonstrates how to apply those models for the pricing of various widely traded fixed income securities. It offers a balanced presentation with both formal mathematical modelling and economic intuition and understanding. The book has a number of distinctive features, including

a thorough and accessible introduction to stochastic processes and the stochastic calculus needed for the modern financial modelling approach used in the book as well as a separate chapter that explains how the term structure of interest rates relates to macro economic variables and to what extent the concrete interest rate models are founded in general economic theory the book focuses on the most widely used models and the main fixed income securities instead of trying to cover all the many specialized models and the countless exotic real life products the in depth explanation of the main pricing principles techniques and models as well as their application to the most important types of securities will enable the reader to understand and apply other models and price other securities the book includes chapters on interest rate risk management credit risk mortgage backed securities and relevant numerical techniques each chapter concludes with a number of exercises of varying complexity suitable for msc students specializing in finance and economics quantitatively oriented mba students and first or second year phd students this book will also be a useful reference for researchers and finance professionals and can be used in specialized courses on fixed income or broader courses on derivatives

environmental modelling has enjoyed a long tradition but there is a defined need to continually address both the power and the limitations of such models as well as their quantitative assessment this book showcases modern environmental modelling methods the basic theory behind them and their incorporation into complex environmental investigations it highlights advanced computing technologies and how they have led to unprecedented and adaptive modelling simulation and decision support tools to study complex environmental systems and how they can be applied to current environmental concerns this volume is essential reading for researchers in academia industry and government related bodies who have a vested interest in all aspects of environmental modelling features include a range of modern environmental modelling techniques are described by experts from around the world including the usa canada australia europe and thailand many examples from air water soil sediment and biological matrices are covered in detail throughout the book key chapters are included on modelling uncertainty and sensitivity analysis and a selection of figures are provided in full colour to enable greater comprehension of the topics discussed

approaches to avoid loss of life and limit disruption and damage from flooding have changed significantly in recent years worldwide there has been a move from a strategy of flood defence to one of flood risk management flood risk management includes flood prevention using hard defences where appropriate but also requires that society learns to live with floods and that stakeholders living in flood prone areas develop coping strategies to increase their resilience to flood impacts when these occur this change in approach represents a paradigm shift which stems from the realisation that continuing to strengthen and extend conventional flood defences is unsustainable economically environmentally and in terms of social equity flood risk management recognises that a sustainable approach must rest on integrated measures that reduce not only the probability of flooding but also the consequences this is essential as increases in the probability of inundation are inevitable in many areas of the world due to climate change while socio economic development will lead to spiralling increases in the consequences of flooding unless land use in floodplains is carefully planned flood risk science and management provides an extensive and comprehensive synthesis of current research in flood management providing a multi disciplinary reference text covering a wide range of flood management topics its targeted readership is the international research community from research students through to senior staff and flood management professionals such as engineers planners government officials and those with flood management responsibility in the public sector by using the concept of case study chapters international coverage is given to the topic ensuring a world wide relevance
