aimed at senior undergraduates and first year graduate students this book offers a principles based approach to inorganic chemistry that unlike other texts uses chemical applications of group theory and molecular orbital theory throughout as an underlying framework this highly physical approach allows students to derive the greatest benefit of topics such as molecular orbital acid base theory band theory of solids and inorganic photochemistry to name a few takes a principles based group and molecular orbital theory approach to inorganic chemistry the first inorganic chemistry textbook to provide a thorough treatment of group theory a topic usually relegated to only one or two chapters of texts giving it only a cursory overview covers atomic and molecular term symbols symmetry coordinates in vibrational spectroscopy using the projection operator method polyatomic mo theory band theory and tanabe sugano diagrams includes a heavy dose of group theory in the primary inorganic textbook most of the pedagogical benefits of integration and reinforcement of this material in the treatment of other topics such as frontier mo acid base theory band theory of solids inorganic photochemistry the jahn teller effect and wade s rules are fully realized very physical in nature compare to other textbooks in the field taking the time to go through mathematical derivations and to compare and contrast different theories of bonding in order to allow for a more rigorous treatment of their application to molecular structure bonding and spectroscopy informal and engaging writing style worked examples throughout the text unanswered problems in every chapter contains a generous use of informative colorful illustrations

the essential new edition of the book that put hypercarbon chemistry on the map a comprehensive and contemporary treatment of the chemistry of hydrocarbons alkanes alkenes alkynes and aromatics towards electrophiles hypercarbon chemistry second edition deals with all major aspects of such chemistry involved in hydrocarbon transformations and of the structural and reaction chemistry of carboranes mixed hydrides in which both carbon and boron atoms participate in the polyhedral molecular frameworks despite the firmly established tetravalency carbon can bond simultaneously to five or more other atoms hypercarbon bonding permeates much organic inorganic and organometallic chemistry and the book serves as the compendium for this phenomenon copious diagrams illustrate the rich variety of hypercarbon structures now known and patterns therein individual chapters deal with specific categories of compound e g organometallics carboranes carbocations or transformations that proceed through transient hypercarbon species detailing fundamental chemistry including reactivity selectivity stereochemistry mechanistic factors and more

this book is a clear and practical guide to help students develop critical thinking writing and reflection skills it explains what critical thinking is and how students should use it throughout their nursing programme this new edition also provides an innovative new framework that helps students appreciate different levels of critical thinking and reflection to help nursing students appreciate the requirements of degree level study the book demonstrates the transferable nature of critical thinking and reflection from academic contexts to the real practice of nursing key features clear and straightforward introduction to critical thinking directly written for nursing students with chapters relating the subject to specific study and practice contexts student examples and scenarios throughout including running case studies from four nursing students and further annotated examples of student s work on the website each chapter is linked to the new nmc standards and essential skills clusters

the series structure and bonding publishes critical reviews on topics of research concerned with chemical structure and bonding the scope of the series spans the entire periodic table and addresses structure and bonding issues associated with all of the elements it also focuses attention on new and developing areas of modern structural and theoretical chemistry such as nanostructures molecular electronics designed molecular solids surfaces metal clusters and supramolecular structures physical and spectroscopic techniques used to determine examine and model structures fall within the purview of structure and bonding to the extent that the focus is on the scientific results obtained and not on specialist information concerning the techniques themselves issues associated with the development of bonding models and generalizations that illuminate the reactivity pathways and rates of chemical processes are also relevant the individual volumes in the series are thematic the goal of each volume is to give the reader whether at a university or in industry a comprehensive overview of an area where new insights are emerging that are of interest to a larger scientific audience thus each review within the volume critically surveys one aspect of that topic and places it within the context of the volume as a whole the most significant developments of the last 5 to 10 years should be presented using selected examples to illustrate the principles discussed a description of the physical basis of the experimental techniques that have been used to provide the primary data may also be appropriate if it has not been covered in detail elsewhere the coverage need not be exhaustive in data but should rather be conceptual concentrating on the new principles being developed that will allow the reader who is not a specialist in the area covered to understand the data presented discussion of possible future research directions in the area is welcomed review articles for the individual volumes are invited by the volume editors

first in the field is a relevant title to describe the pioneer force destined to operate a hitherto un tested concept in modern aerial warfare the 1st bomb division the initial period of shallow penetration missions with a severely under strength force of b 17s crews and support equipment was followed by growing and finally unsupportable losses nevertheless from early 1944 onward it was becoming clear that what was by then the 1st bomb division had held its ground often against painful tactical and strategic odds and in doing so had laid the foundations for the final victory of america s bombing campaign against hitler s regime
