this book tells 101 stories of company efforts to implement the many aspects of flow manufacturing including such topics as just in time production total quality control reorganization of factories into product focused or customer focused cells plants in a

plant material flows by the simplicity of visual kanban supplier partnerships quick setup of equipment cross training and job rotation of the work force and many more the 101 mini case studies dubbed caselets include 26 non u s companies from 12 countries and cover a wide swath of industrial sectors and include many well known corporations such as apple campbell soup honeywell and boeing from the 1980s to the present the author has been taking the message of process improvement and customer focused excellence far and wide most of these travels usually in connection with delivering a seminar include brief factory tours in which he compiled detailed notes and then organized them as brief reports his unvarnished analysis or take on what they do well and what needs improvement in the main the reports were then sent back to the hosts of the plant tour these factory tours and these follow up reports form the basis of the large majority of this book s caselets many of the caselets bring to life process improvement methodologies in detail with lots of caselets to draw from the readers will find vivid examples of similar companies and processes within their respective industries for example the caselets often include applications of advanced concepts in cost management employee training performance management supply chains and logistics as well as applications of plant layout quick setup material handling quality assurance scheduling ergonomics and flow analysis

additive manufacturing of aerospace composite structures fabrication and reliability introduces the reader to the current state of technologies involved in processing and design of polymer reinforced fiber composites using additive manufacturing s automated fiber placement methods through ten seminal sae international papers currently the material layup strategy in terms of process selection and manufacturability is usually not prioritized in the design phase engineers do not have a good way to see how their design choices can affect the manufacturing process beyond their initial structural level considerations the result is typically a large amount of experimental testing necessary to qualify the materials and structures typified in the classical building block approach such an environment makes mistakes difficult to solve and should redesign be required obtaining reliable information is hard to piece together additive manufacturing of aerospace composite structures fabrication and reliability approaches the question of quality in these structures from a hands on solution driven perspective

comprehensive reference on the technology of large format additive manufacturing additive manufacturing am has been adopted by several industries for high and low volume fabrication of three dimensional workpieces such as machine parts tools

and specialized engineering components depending on the desired result additive manufacturing technologies can be employed using base materials such as polymers metals or clays and cements the recent technology progress also allows for the energy material and time efficient fabrication of large format workpieces and intermediate products from the centimeter to the meter range large format additive manufacturing reviews the fabrication relevant aspects of large format additive manufacturing with polymeric cement and clay as well as metallic materials covering the technologies the specifics of the employed materials most prevalent applications and the characterization and the implementation in large scale industrial processes the book is divided into three main sections each dedicated to a material family with additional chapters addressing the specific nature of each family in large format additive manufacturing readers find first hand insights to develop cost and material efficient production of mass customized goods clear guidance on how to transfer findings from the lab into industrial production processes information on material characterization simulation approaches and economic drivers case studies providing a broad and updated view of the field from experts across various disciplines showing a clear path towards large scale precision manufacturing of intermediate and finished engineering products large format additive manufacturing is an essential up to date reference for materials scientists process engineers mechanical engineers professionals in the metal processing industry and research centers and companies interested in exploring this exciting field
