the fourth edition of the highly acclaimed principles and practice of geriatric medicine provides an account of the fundamental changes associated with ageing which are essential to our understanding and management of the elderly sick population the title has been extensively revised and updates to reflect the enormous changes in treatment options and medical conditions emerged since publication of the third edition written by worldwide experts of international repute this is the most up to date and comprehensive single reference source currently available principles practice of geriatric medicine fourth edition incorporates more than 30 new chapters including preventive geriatrics anorexia of aging managements of weight loss dehydration vitamins and minerals in the elderly cancer and aging mild cognitive impairment treatment of behavioral disorders the older patient with down s syndrome drug abuse in older people breast cancer women s health a truly global perspective including new chapter on care of the elderly in israel old age in a young land geriatric medicine in china geriatric medicine education in europe geriatrics from the european union perspective india day hospitals perspectives from latin america the title will be indispensable for all those involved in the treatment of older patients gerontologists to keep up to date with the latest developments in the field general practitioners and specialists in health policy and community care who increasingly have to deal with a significant number of older people academic researchers in geriatric medicine who are in need for an all encompassing reference work medical registrars uk residents us in order to pass their exams teachers of geriatric medicine hospital libraries with increasing budgets to spend on much needed resource in this growing field professionals within the pharmaceutical industry in order to monitor treatment options and new prescription developments

with the appearance of a textbook as comprehensive as this one it is clear that the field of geriatrics is coming of age the broad scope of these volumes shapes a substantial answer to the question what is geriatrics and why should we be interested in it as i see it there are at least five reasons first the scientific or intellectual reason gerontology is the study of aging from the biologic psychological and social perspectives

there is increasing interest in the fascinating insights into the biologic mechanisms of aging errors in protein synthesis dna repair mechanisms alterations of the neuroendocrine system changes in the immune system genetic controls and somatic mutations second the demographic reason this is the century of old age there has been a 26 year gain in the average life expectancy this gain compares with that acquired from 3 000 years b c the bronze age to the year 1900 which was about 29 years therefore in one century there has been a gain in the average life expectancy almost equal to 5 000 previous years of human history in 1830 one of three newborn infants survived beyond 60 years of age

in an ageing population geriatric medicine has become central to general practice and to emergency and general internal medicine in the hospital setting diseases are more common in the older person and can be particularly difficult to assess and to treat effectively in a field that has limited evidence yet makes up a substantial proportion of the work of most clinicians fully updated this second edition of the oxford handbook of geriatric medicine includes all the information required to deliver effective geriatric care guidance is given on a range of key treatment areas indicating where practice differs from that of younger adults or is ill informed by evidence where dangers lurk for the inexperienced clinician and on the many ethical and clinical dilemmas common in geriatric practice this accessible handbook is essential reading for all junior doctors and specialist trainees in geriatric medicine and general internal medicine and for all medical and nursing staff who manage older people

geriatric medicine at a glance logically presents the core principles of geriatric medicine including mechanisms of ageing changes in physiology commonly seen in older adults and the clinical management and treatment of the key medical presentations affecting older patients it provides a thorough overview of the essential required core knowledge mapped to the british geriatrics society undergraduate curriculum on ageing geriatric medicine at a glance is fully aligned with the newly developed british geriatric society curriculum on ageing for undergraduate medical students explains the relevant concepts associated with ageing in addition to the common medical presentations seen in older adults includes the perspective of nurses and other allied health professionals features best of

five mcq self assessment questions geriatric medicine at a glance will help address the uncertainty often experienced by medical students and junior doctors when dealing with older patients

this book distills the wealth of knowledge contained in the classic text geriatric medicine an evidence based approach 4 e into a practical guide for primary care family medicine and internal medicine residents written by top experts in the field the book offers a detailed compact overview of geriatric care it addresses geriatric pharmacology medicare and medicaid and numerous other subjects unique to older adults the case based instructional approach helps readers navigate the complexity of prevention presentation and treatment for conditions such as depression dementia and hypertension graphs and tables aid the reader in determining the proper courses of treatment

this lucid work provides a distillation of the author's lifetime experience with and compassion for the elderly the expression giants of geriatrics coined by the author is used in medical language to describe the principle chronic disabilities of old age these include immobility instability incontinence and intellectual impairment chapters on each of these have been supplemented by chapters on five further chronic disabilities which are stroke aphasia depression and visual and auditory handicap each chapter ends with a short critical bibliography and the most significant points are encapsulated in original aphorisms the aim is to provide practical guidance in non specialist language for management of the giants concentrating on areas of geriatric medicine which are not normally available in standard textbooks

prior to the evolution of modern medicine with its superabundance of diagnostic and therapeutic medical technology and the rise of the litigious society the value of clinical skills was evident in both history taking and the physical examination even today physicians can make a correct diagnosis solely by utilizing their clinical skills in about 90 of patient encounters furthermore in the past physicians understood their role as a psychologist and were more apt to be familiar with the social context of their patients house calls were common the doctor was also a placebo who at his best inspired hope and probably sped recovery geriatricians use both clinical skills and take advantage of modern technology sparingly for

they know they are dealing with the most challenging and frail of patients older patients who so often present with multiple complex interacting behavioral social and physical problems in contrast to medicine for young people working with the older patient is much more demanding furthermore the complex issue of societal attitudes toward old people can come into play specially the physician's need to deal with natural fears of aging dependency depression dementia and death ageism is the enemy of effective medical treatment at its best geriatrics exemplifies ways that medical care for all ages can become more humane problem oriented and holistic

geriatric medicine is aimed at the promotion of health in older adults there is no particular age at which patients are placed under the care of a geriatrician it depends on the patient's needs owing to a physiologic decline in organs older adults develop certain diseases and complications from even minor problems sometimes even multiple problems can compound often leading to polypharmacy this can lead to adverse drug reactions and drug interactions geriatric medicine can have several specializations depending on the care provided to the elderly some of such specializations are geriatric nephrology geriatric dentistry geriatric rheumatology geriatric urology etc this book provides comprehensive insights into the field of geriatric medicine it presents researches and studies performed by experts across the globe it will help the readers in keeping pace with the rapid changes in this field

the third edition of the definitive international reference book on all aspects of the medical care of older persons will provide every physician involved in the care of older patients with a comprehensive resource on all the clinical problems they are likely to encounter as well as on related psychological philosophical and social issues

geriatric medicine and elderly care lecture notes ninth edition an essential resource for meeting the needs of an ageing patient population as the global population ages geriatric medicine is steadily becoming one of the most important areas of medical research and care healthcare systems in developed countries are adapting to this shift in the population and doctors are finding that a larger and larger proportion of their patients are older current medical training often does not include adequate coverage of geriatric medicine and

students may well find they require more extensive resources for meeting older patients needs lecture notes geriatric medicine and elderly care meets this need with a set of comprehensive but straightforward introductions to the foundational concepts of geriatric medicine combining a user friendly format with extensive high quality figures and illustrations it is a must have resource for medical students looking to deepen their knowledge of a widening area of essential care now thoroughly revised and updated to reflect the latest research and medical knowledge of ageing and elder care this is an essential contribution to the popular lecture notes series readers of the ninth edition of lecture notes geriatric medicine and elderly care will also find new chapters on the science of ageing including immunosenescence and rejuvenation research and geriatric oncology full coverage of the british geriatrics society and european undergraduate curriculums a companion website with appendices key revision points for each chapter and further readings lecture notes geriatric medicine and elderly care is ideal for medical students and foundation year doctors in most specialties who are treating frail older people it also provides a starting point for revision for higher specialty examinations in geriatric medicine anki revision cards a set of anki app digital revision cards is available to go with this textbook the cards contain the material from the self test questions in the book anki app is a cross platform mobile and desktop flashcard app that can support your studies see [ankiapp.com](http://ankiapp.com) it uses an algorithm to present cards you know less well more frequently you can keep the cards on your mobile device and study them in your downtime visit [lecturenoteseries.paediatrics](http://lecturenoteseries.paediatrics) to download the card set to your device

popular with generations of practitioners brocklehurst's textbook of geriatric medicine and gerontology has been the definitive reference of choice in the field of geriatric care the new 7th edition by howard m fillit md kenneth rockwood md and kenneth woodhouse carries on this tradition with an increased clinical focus and updated coverage to help you meet the unique challenges posed by this growing patient population consistent discussions of clinical manifestations diagnosis prevention treatment and more make reference quick and easy while over 255 illustrations compliment the text to help you find what you need on a given condition examples of the latest imaging studies depict the effects of aging on the brain and

new algorithms further streamline decision making emphasizes the clinical relevance of the latest scientific findings to help you easily apply the material to everyday practice features consistent discussions of clinical manifestations diagnosis prevention treatment and more that make reference quick and easy includes over 255 illustrations including algorithms photographs and tables that compliment the text to help you find what you need on a given condition provides summary boxes at the end of each chapter that highlight important points features the work of an expert author team now led by dr howard m fillit who provides an american perspective to complement the book s traditional wealth of british expertise includes an expanded use of algorithms to streamline decision making presents more color images in the section on aging skin offering a real life perspective of conditions for enhanced diagnostic accuracy includes examples of the latest imaging studies to help you detect and classify changes to the brain during aging offers grade a evidence based references keyed to the relevant text

both volumes sold as a combined set for a one time purchase older adults represent the most rapidly growing demographic in the u s and in many developed countries around the world the field of geriatric medicine is still relatively young and is only recently seeing a significant increase in peer reviewed literature medicare and medicaid expenditures related to older adults are nearly a trillion dollars year in the us how our healthcare system cares for older adults and how those older adults navigate an increasingly complex system is of the utmost importance according to the institute of medicine physicians and other healthcare professionals receive an inadequate amount of training in geriatric medicine geriatric medicine is based on the concept of delivering person centered care with a focus on function and quality of life it is essential that physicians nurse practitioners physician assistants pharmacists social workers and other health care professionals all be knowledgeable about thegeriatric approach to care geriatric medicine varies from most other fields in medicine while many specialties function on the basis of evidence based literature geriatricians and other clinicians caring for older adults must integrate relatively limited evidence with variable physiological changes and complex psychosocial determinants geriatricians are used to caring for 90 year olds with multiple chronic illnesses their variable physiology leads to uncertain

responses to pharmacotherapy and their personal goals and wishes need to be incorporated into any plan of care practicing geriatric medicine requires the ability to see patterns but it goes one step further as the rules are constantly in flux every patient is an individual with particular needs and goals in order to provide true person centered care to older adults one has to incorporate these factors into the decision making process the proposed handbook is designed to present a comprehensive and state of the art update that incorporates existing literature with clinical experience basic science and the physiology of aging create a background but are not the main focus this is because every chapter has been written through the lens of person centered care this book is about focusing on what matters to the person and how that is not always about pathology and physiology the reader generally will not find simple solutions to symptoms diseases and syndromes in fact the key to caring for geriatric patients is the ability to think both critically and divergently at the same time geriatrics encompasses multiple disciplines and spans all of the subspecialties it requires knowledge of working within an interdisciplinary team it requires an appreciation of how quality of life varies with each individual and creates treatment and care plans that also vary and most of all it requires a firm commitment to first learning who the person is so that all of the necessary data can be analyzed and integrated into a true person centered plan of care this book aims to serve as an unparalleled resource for meeting these challenges updated and revised from the previous edition this text features over 40 new peer reviewed chapters new references and a wide array of useful new tools that are updated on a regular basis by interdisciplinary and interprofessional experts in geriatric medicine

the field of geriatrics foundations is rooted in the classic papers of early descriptions of aging and age related diseases in classic papers in geriatric medicine with current commentaries the authors chose the classic papers providing a combination of expert opinion and objective assessment the 15 areas in this volume represent the beginnings of practice and thoughts about the best ways to care for older patients each paper is introduced by a commentary describing the singular contributions of the chosen paper with a short list of other important early papers in that area and in many cases reflect on progress in that particular field the commentaries are

personal statements by the authors about the influence of the papers chosen not meant to be exhaustive reviews of the clinical area in question classic papers in geriatric medicine with current commentaries exemplifies the importance of a paper and its ability to retain its impact over time while many of the classic papers in this collection have stood the test of time others have gained classic status by virtue of their profound influence in relatively quick measure or because of timeliness in filling a void in knowledge

this book provides family doctors with a wealth of evidence based indications and tips regarding geriatric medicine and approaches for the management of older patients to be applied in daily practice after discussing old and new features of healthy ageing and the approaches required in family medicine consultation the text introduces key elements of geriatric medicine such as frailty sarcopenia and the comprehensive geriatric assessment cga before describing a range of characteristics unique to older patients in different contexts with a dedicated section on palliative care the role of polypharmacy and the importance of quaternary prevention and deprescribing are also addressed finally the book emphasizes both the importance of a humanistic approach in caring and the approach of research and meta research in geriatrics though many texts explore the role of primary care professionals in geriatric medicine the role of family doctors in older people care has not yet been clearly addressed despite the growing burden of ageing which has been dubbed the silver tsunami family physicians care for individuals in the context of their family community and culture respecting the autonomy of their patients in negotiating management plans with their patients family doctors integrate physical psychological social cultural and existential factors utilizing the knowledge and trust engendered by repeated visits they do so by promoting health preventing disease providing cures care or palliation and promoting patient empowerment and self management this will likely become all the more important since we are witnessing a global demographic shift and family doctors will be responsible for and involved in caring for a growing population of older patients this book is intended for family medicine trainees and professionals but can also be a useful tool for geriatricians helping them to better understand some features of primary care and to more fruitfully interact with family doctors
