global environment monitoring system

david d kumar and daryl e chubin we live in an information age technology abounds information technology communication technology learning technology as a once popular song went something is happening here but it is just not exactly clear the world appears to be a smaller less remote place we live in it but we are not necessarily closely tied to it we lack a satisfactory understanding of it so we are left with a paradox in an information age information alone will neither inform nor improve us as citizens nor our democracy society or institutions no improvement will take some effort it is a heavy burden to be reflective indeed analytical and disciplined but only constructively constrained by different perspectives the science based technology that makes for the complexity controversy and uncertainty of life sows the seeds of understanding in science technology and society studies as it is known encompasses a hybrid area of scholarship now nearly three decades old as d r sarewitz a former geologist now congressional staffer and an author put it after all the important and often controversial policy dilemmas posed by issues such as nuclear energy toxic waste disposal global climate change or biotechnology cannot be resolved by authoritative scientific knowledge instead they must involve a balancing of technical considerations with other criteria that are explicitly nonscientific ethics aesthetics equity ideology trade offs must be made in light of inevitable uncertainties sarewitz 1996 p 182

conventions treaties and other responses to global issues is a component of encyclopedia of institutional and infrastructural resources in the global encyclopedia of life support systems eolss which is an integrated compendium of twenty one encyclopedias this theme conventions treaties and other responses to global issues deals with the issue of international resource regimes these are formal responses by states to the threats posed by trans boundary pollution or the distribution of resources in the past thirty years the number of international environmental agreements has steadily risen to reach record numbers and these agreements have secured a firm place in the hierarchy of international affairs there is a loose assumption that this is a good thing and that this rise has resulted in a commensurable improvement in environmental protection and resource allocation but is this actually the case in fact is there a positive correlation at all or are there negative correlations what are the connections between environmental diplomacy and environmental protection and how can environmental protection be achieved these are just a few of the questions that will be addressed in this theme whilst at the same time giving an overview of the most important international resource regimes and the most influential international organizations having an environmental impact the theme takes the following shape the first section introduces issues of international

environmental law and its history showing that international law can take many different forms here we explain what policy tools states have in drafting responses to global environmental issues the second section deals with the most prominent international environmental agreements and gives a state of the art overview of existing regimes the third and last section of this theme introduces the key actors in the international arena besides states such as international organizations and civil society actors such as pressure groups these two volumes are aimed at the following five major target audiences university and college students educators professional practitioners research personnel and policy analysts managers and decision makers and ngos

the ozone layer was discovered in 1913 by the french physicists charles fabry and henri buisson the ozone layer has the capability to absorb almost 97 99 of the harmful ultraviolet radiations that sun emit and which can produce long term devastating effects on humans beings as well as plants and animals the earth s stratospheric ozone layer plays a critical role in absorbing ultraviolet radiation emitted by the sun in the last thirty years it has been discovered that stratospheric ozone is depleting as a result of anthropogenic pollutants ozone layer depletion is one of the most serious problems faced by our planet earth it is also one of the prime reasons which are leading to global warming ozone layer depletion describes two related phenomena observed since the late 1970s a steady decline of about four percent in the total amount of ozone in earth s stratosphere and a much larger springtime decrease in stratospheric ozone around earth s polar regions the latter phenomenon is referred to as the ozone hole chlorofluorocarbons cfc's and other halogenated ozone depleting substances ods are mainly responsible for man made chemical ozone depletion this book describes of international efforts to protect the ozone layer the greatest success yet achieved in managing human impacts on the global environment the book provides an account of the ozone depletion issues from the first attempts to develop international action in the 1970s to the mature functioning of the montreal regime this book represent state of knowledge regarding examines the parallel developments of politics and negotiations scientific understanding and controversy technological progress and industry strategy to draws some conclusions concerning the setting of goals for that shaped the issue s development and its effective management simply explained ozone layer depletion is an important book bringing together diverse viewpoints from environmentalist state agencies and regulators for all who wish to save earth with quality life

measuring environmental degradation is a unique book that provides a comprehensive yet concise overview of the key issues of environmental significance addressed as part of the eurostat environmental pressure indicators project the book is part of the

towards environmental pressure indicators for the eu tepi series that has resulted from the project the book is divided into ten distinct chapters each one concentrating on a particular environmental policy field ranging from ozone layer depletion to waste and water pollution the contributors each experts in their chosen discipline provide background information on the main environmental pressures faced by the eu identify the practical actions necessary to reduce these pressures and reflect upon the process of selecting an imaginative list of pressure indicators the indicators are intended to describe these pressures in a highly aggregated format in order to communicate environmental information clearly and effectively whilst retaining scientific soundness the book extends discussion by considering the expected benefits of communicating trends in environmental pressures to policymakers and the wider public and considering whether central political intervention is necessary to deal with problem pressures as well as offering a valuable insight into the methodological issues and processes concerned with the development of pressure indicators the book outlines the international framework for each policy field the work benefits from the diversity of views and approaches proposed by the contributors to create an extensive overview of the subject this original and topical collection of essays will make valuable reading for researchers and students of environmental studies environmental policymakers in both governmental and non governmental institutions as well as anyone with an interest in current environmental issues
