the monograph is about a meta theory of knowledge production process and the logical pathway that connects the epistemic possibility to the epistemic reality it examines the general conditions of paradigms for information processing and isolates the classical and fuzzy paradigms for comparative analysis the sets of conditions that give rise to them are defined stated and analyzed to abstract the corresponding sets of laws of thought the fuzzy paradigm with its corresponding logic and mathematics is related to inexact symbolism for the defective information structure where the results of the knowledge production must satisfy the epistemic conditionality composed of fuzzy conditionality and fuzzy stochastic conditionality under the principle of logical duality with continuum the classical paradigm with its corresponding logic and mathematics is related to exact symbolism for exact information structure where the vagueness component of the defectiveness is assumed away and where the results of the knowledge production must satisfy no epistemic conditionality or at the maximum only the stochastic conditionality under the principle of logical dualism with excluded middle it is argued that the epistemic path that links ontological space to the epistemological space is information the ontological space is taken as the primary category of reality while the epistemological space is shone to be a derivative such information is universally defective and together with assumptions imposed guides the development of paradigms with their laws of thought logic of reasoning mathematics and computational techniques the relational structure is seen in terms of logical trinity with a given example as matter information energy transformational trinity which is supported by the time trinity of past present future relationality the book is written for professionals researchers and students working in philosophy of science decision choice theories economies sciences computer science engineering cognitive
