the sub title of this symposium is accurate and in a curious way promises more than it states classical physicist modern philosopher heinrich hertz as the consummate experimentalist of 19th century technique and as brilliant clarifying critic of physical theory of his time achieved one of the fulfillments but at the same time opened one of the transition points of classical physics thus in his popular lecture on the relations between light and electricity at heidelberg in the fall of 1889 hertz identified the ether as henceforth the most fundamental problem of physics as the conceptual mystery but also the key to understanding mass electricity and gravity of hertz's demonstration of electric waves helmholtz told the physical society of berlin gentlemen i have to communicate to you today the most important physical discovery of the century hertz philosophizing in his direct lucid pithy style once wrote we have to imagine perhaps this is metaphysics on the horizon in the early pages of his principles of mechanics we read a doubt which makes an impression on our mind cannot be removed by calling it metaphysical every thoughtful mind as such has needs which scientific men are accustomed to denote as metaphysical pm23 and at another place concerning the terms force and electricity and the alleged mystery of their natures hertz wrote we have an obscure feeling of this and want to have things cleared up

of all the developments in twentieth century physics none has given rise to more heated debates than the changes in our understanding of science precipitated by the quantum revolution in this revolution niels bohr's dramatically non classical theory of the atom proved to be the springboard from which the new atomic physics drew its momentum furthermore bohr's contribution was crucial not only because his interpretation of quantum mechanics became the most widely accepted view but also because in his role as educator and spokesman for atomic physics bohr was very much the patron spirit of the entire quantum revolution the conceptual framework which he proposed to provide a new viewpoint for understanding the quantum theoretical description of atomic systems became for most of

this century the dominant outlook of countless productive experimental and theoretical physicists he called this new framework complementarity
