over the last few years increasing attention has been focused on the development of children s acquisition of 21st century skills and digital competences consequently many education scholars have argued that teaching technology to young children is vital in keeping up with 21st century employment patterns technologies such as those that involve robotics or coding apps come at a time when the demand for computing jobs around the globe is at an all time high while its supply is at an all time low there is no doubt that coding with robotics is a wonderful tool for learners of all ages as it provides a catalyst to introduce them to computational thinking algorithmic thinking and project management additionally recent studies argue that the use of a developmentally appropriate robotics curriculum can help to change

negative stereotypes and ideas children may initially have about technology and engineering the handbook of research on using educational robotics to facilitate student learning is an edited book that advocates for a new approach to computational thinking and computing education with the use of educational robotics and coding apps the book argues that while learning about computing young people should also have opportunities to create with computing which have a direct impact on their lives and their communities it develops two key dimensions for understanding and developing educational experiences that support students in engaging in computational action 1 computational identity which shows the importance of young people s development of scientific identity for future stem growth and 2 digital empowerment to instill the belief that they can put their computational identity into action in authentic and meaningful ways covering subthemes including student competency and assessment programming education and teacher and mentor development this book is ideal for teachers instructional designers educational technology developers school administrators academicians researchers and students

seating and wheeled mobility a clinical resource guide presents clinical assessment considerations when working with a person with a disability who may need wheelchair seating for postural support skin integrity or a wheelchair base to best meet dependent or independent mobility needs michelle l lange and jean minkel have designed this text to support occupational and physical therapists complex rehabilitation technology suppliers and even third party payers who are interested in wheelchair seating and mobility assessment and applications seating and wheeled mobility provides a wide spectrum of information from foundational information for those practitioners who are new to the field to in depth population specific information for practitioners who perhaps have not worked with a particular population in the past information sharing opportunities for demonstration and trial and patience on the part of the clinician working with the person with a disability are all critical precursors to the actual process of making equipment recommendations seating and wheeled mobility is divided into sections each addressing a different area of clinical practice the first section is an in depth presentation of the assessment process and the critical understanding of pressure management needed by the clinical team when working with a client population who rely on wheeled mobility the second section focuses on postural support also included is a completely updated method to measure and describe the seated person and related support surfaces needed when recommending a device the third section lays the

foundation for clinical decision making around the assessment for and application of the most appropriate wheeled mobility device the fourth section provides in depth clinical applications for each category of mobility devices also addressed is proper documentation to assist in the funding of these devices the fifth section provides population specific information regarding the clinical application of position pressure management and functional mobility as it applies to the pediatric geriatric and bariatric populations as well as persons with both degenerative and complex neuromuscular impairments the last section presents additional considerations when working with persons who are aging with a disability environmental assessments transportation and the application of standards seating and wheeled mobility a clinical resource guide provides the depth and breadth of the clinical practice of wheelchair seating and mobility to both those who are new to the field as well as seasoned professionals

recent improvements in led technology have made them as ubiquitous as cell phones in fact leds light up almost all cell phones screens the technology s myriad applications and low energy use have made it nearly impossible to get through daily chores without coming in contact with leds probable advances include increased ability of the technology to support more efficient lighting and enhanced communications with balanced coverage of the basics and future developments introduction to light emitting diode technology and applications takes you on a tour of the led evolution the book begins with a brief history of the effort to enable the device that generates light through modern organic leds and reviews the fundamentals and principles of light prior to a detailed explanation of how leds generate different colors after forming this basic foundation the book examines the key leds in lighting and communications it then discusses the latest opportunities and advancements in high brightness hb led technology solid state lighting and handheld electronic applications as we approach a new decade the role of leds is literally set to explode with organic light emitting diodes emerging as a leading next generation technology for electronic displays and lighting challenges still exist including light extraction luminosity and white light generation not to mention non technical obstacles such as ip disputes and the lack of standards this book provides a foundation for resolving these issues and developing new applications for leds in the promising general illumination market

the ultimate power packed crash course in building arduino based projects in just 10 days key features a carefully designed 10 day crash course covering major project device types with 20 unique hands on examples get easy to understand explanations of basic electronics fundamentals and commonly used c sketch functions this step by step guide with 90 diagrams and 50 important tips will help you become completely self reliant and confident book descriptionthis book is a quick 10 day crash course that will help you become well acquainted with the arduino platform the primary focus is to empower you to use the arduino platform by applying basic fundamental principles you

will be able to apply these principles to build almost any type of physical device the projects you will work through in this book are self contained micro controller projects interfacing with single peripheral devices such as sensors building compound devices multiple devices in a single setup prototyping standalone devices powered from independent power sources working with actuators such as dc motors interfacing with an ac powered device wireless devices with infrared radio frequency and gsm techniques and finally implementing the internet of things using the esp8266 series wi fi chip with an iot cloud platform the first half of the book focuses on fundamental techniques and building basic types of device and the final few chapters will show you how to prototype wireless devices by the end of this book you will have become acquainted with the fundamental principles in a pragmatic and scientific manner you will also be confident enough to take up new device prototyping challenges what you will learn write arduino sketches and understand the fundamentals of building prototype circuits using basic electronic components such as resistors transistors and diodes build simple compound and standalone devices with auxiliary storage sd card a dc battery and ac power supplies deal with basic sensors and interface sensor modules by using sensor datasheets build remote controlled devices with infrared ir radio frequency rf and telephony with gsm learn iot edge device prototyping using esp8266 and iot cloud configuration who this book is for this book is a beginner s crash course for professionals hobbyists and students who are tech savvy have a basic level of c programming knowledge and basic familiarity with electronics be it for embedded systems or the internet of things
