this book constitutes the refereed proceedings of the 7th international conference on intelligent tutoring systems its 2004 held in macei alagoas brazil in august september 2004 the 73 revised full papers and 39 poster papers presented together with abstracts of invited talks panels and workshops were carefully reviewed and selected from over 180 submissions the papers are organized in topical sections on adaptive testing affect architectures for its authoring systems cognitive modeling collaborative learning natural language dialogue and discourse evaluation machine learning in its pedagogical agents student modeling and teaching and learning strategies

this book defines and describes a new discipline named computational psychometrics from the perspective of new methodologies for handling complex data from digital learning and assessment the editors and the contributing authors discuss how new technology drastically increases the possibilities for the design and administration of learning and assessment systems and how doing so significantly increases the variety velocity and volume of the resulting data then they introduce methods and strategies to address the new challenges ranging from evidence identification and data modeling to the assessment and prediction of learners performance in complex settings as in collaborative tasks game simulation based tasks and multimodal learning and assessment tasks

computational psychometrics has thus been defined as a blend of theory based psychometrics and data driven approaches from machine learning artificial intelligence and data science all these together provide a better methodological framework for analysing complex data from digital learning and assessments the term computational has been widely adopted by many other areas as with computational statistics computational linguistics and computational economics in those contexts computational has a meaning similar to the one proposed in this book a data driven and algorithm focused perspective on foundations and theoretical approaches established previously now extended and when necessary reconceived this interdisciplinarity is already a proven success in many disciplines from personalized medicine that uses computational statistics to personalized learning that uses well computational psychometrics we expect that this volume will be of interest not just within but beyond the psychometric community in this volume experts in psychometrics machine learning artificial intelligence data science and natural language processing illustrate their work showing how the interdisciplinary expertise of each researcher blends into a coherent methodological framework to deal with complex data from complex virtual interfaces in the chapters focusing on methodologies the authors use real data examples to demonstrate how to implement the new methods in practice the corresponding programming codes in r and python have been included as snippets in the book and are also available in fuller form in the github code repository that accompanies the book
