this book arose from courses taught by the authors and is designed for both instructional and reference use during and after a first course in algebraic topology it is a handbook for users who want to calculate but whose main interests are in applications using the current literature rather than in developing the theory typical

areas of applications are differential geometry and theoretical physics we start gently with numerous pictures to illustrate the fundamental ideas and constructions in homotopy theory that are needed in later chapters we show how to calculate homotopy groups homology groups and cohomology rings of most of the major theories exact homotopy sequences of fibrations some important spectral sequences and all the obstructions that we can compute from these our approach is to mix illustrative examples with those proofs that actually develop transferable calculational aids we give extensive appendices with notes on background material extensive tables of data and a thorough index audience graduate students and professionals in mathematics and physics
