the study of tumor markers is not only one of the most important but also one that offers one
of the richest perspectives in biology and clinical oncology the aim of scientists in this field is
to adduce evidence of a property that is typical of and exclusive to tumor cells and which is
easy to determine in order to immediately recognize or even better to foresee neoplastic
transformations unfortunately despite the large number of scientists and laboratories engaged
in this work the ideal tumor marker has not yet been identified however it is worth noting that
new trends in molecular biology and immunovirology have recently opened up new avenues
that may lead to the eventual resolution of this problem in this book different approaches to
the identification of tumor markers from the points of view of biochemistry immunology and
molecular biology are compared in order to explore possible interrelationships and to
stimulate scientific collaboration among scientists active in these fields both in basic research
and in clinical applications we wish to thank all the contributors and also the publisher
