advancement of the state of scholarship on media management is a three pronged process the body of knowledge on which media executives and managers can draw grows as 1 core concepts and analytical frameworks are refined augmented and occasionally supplemented or replaced by new ideas that better explain the roles of media in their larger economic and societal contexts 2 rigorous empirical analysis probes the limitations of current understanding and raises new questions and 3 grounded case studies extract knowledge through theoretically informed observation of situations and processes that are too complex and multi faceted for more tightly controlled statistical analyses but still are too rich in their potential to contribute to knowledge to ignore all three prongs are represented in this edited volume which draws on the best of the new research and thinking showcased at the annual conference of the international media management academic association held during october 24 25 2014 in pamplona spain the book s 10 chapters are organized into three main sections that move respectively from a high level focus on core principals and fundamental challenges to effective management to more narrowly focused research but with

generalizable findings on solutions to concrete and specific problems faced by media firms trying to improve their results from the services and products they offer to case studies of market level change in three very different political and economic environments the remainder of this brief introduction was written as a guide to the research and findings presented in these sections

today s biodiversity is the spectacular product of hundreds of millions of years of evolution understanding how this diversity of living organisms appeared is one of the most intriguing and challenging question in biology because organismal morphology is established during embryonic development and because morphological traits diversified from ancestral forms during evolution it can be inferred that changes in the mechanisms controlling embryonic development are instrumental for morphological evolution this syllogism lies at the very heart of a new discipline called evo devo which is centered in the identification of the cellular and genetic mechanisms that through modifications in developmental programmes were at the base of morphological innovations during evolution after the discovery of the broad conservation of gene content and regulatory networks in the animal kingdom as well as in plants evo devo is orienting towards the study of differences through experimental and functional approaches given the wide range of species gene families and developmental processes considered a concerted effort is still required to shed light on the genetic cellular and molecular mechanisms involved in phenotypic evolution it is a particularly exciting time for this field of evolutionary developmental biology as the advent of novel imaging genome editing and sequencing technologies allows the study of almost any organism in ways that were unthinkable only a few years ago therefore the aim of this frontiers research topic is to gather an original collection of experimental approaches concepts and hypotheses reflecting the current diversity of the evo devo field we have organized the articles according to the mechanistic depth with which they tackle specific evolutionary issues hence comparisons of expression patterns have been grouped in chapter 1 changes in regulatory interactions and gene networks are presented in chapter 2 while chapter 3 focuses on the evolution of developmental processes and biological patterns
