sociology, organization studies and the history of medicine to follow the neoliberal dynamics that have engendered an acceleration toward peak. Over the span of the last 40 years, it traces the emergence of different voices and groups that have contested this evolution, particularly around specific crisis points and revelatory moments including the fight for access to HIV/AIDS medicines, the global health era, pharmaceutical corporate social responsibility, the advent of personalized medicine and digital health, COVID-19 and others. The authors trace the shifting coalitions between the pharmaceutical industry, patient organisations and governments that kept propping up the neoliberal value system throughout this evolution. They show that the recent acceleration toward peak has led many centrist voices from patient organizations, academia and politics to start changing course from market repair to imagining alternative pharmaceutical economies, prominently including imaginaries around the pharmaceutical commons. The book closes with a set of recommendations for policy makers and civil society actors interested in fostering an alternative political economy of health. This book argues that we have reached the peak of a particular model for pharmaceutical production, the neoliberal value model that has been in place since the early 1980s. Peak designates a state where a value model's contradictions become exacerbated to a point where the system cannot but change. It is a point where an industry's products become too expensive and its resources exhausted, and where the coalitions that have held up that particular value model disintegrate. In other words, it is the point where an industry collapses under its own greed of having captured too much value for itself, leaving none to the other actors in the system. Peak Pharma argues that the neoliberal pharmaceutical system is reaching its peak in several vital respects: peak pricing, peak concentration, peak financialization, and peak expansion. It uses the term to signal the crisis and possible end of an era-defining business model in the pharmaceutical
