a generic approach is proposed in this work that automatically constructs suitable calculation models from a heretofore invented formal description language two positive effects arise from that firstly all inherently and explicitly contained complexity of safety instrumented systems is identified once and condensed into a set of transformation formulas generating the actual calculation models secondly providing a flexible and extensive description language encourages smart and quick engineering processes enables for non standard solutions and relieves safety engineers from the challenge of actually deriving explicit calculation models by hand a suitable new type of discrete time multiphase markov model is chosen as mathematical basis and comes along with the required solver algorithms for retrieving the desired unavailability characteristics the probability of failure on demand pfd and the probability of fail safe pfs i.e. an operational unavailability as economical indicator
