the first four books in the david joseph mysteries series by terence newnes now available
in one volume the david joseph chronicle in tamil nadu india psychologist david joseph
partners with the police to crack unresolved cases and faces a cold blooded murderer the
psychologist and the psychopath david joseph is drawn into a deadly game when a
vengeful psychopath targets him as the next victim as the body count rises he teams up
with his brother in law inspector raj kumar to stop the elusive killer season of the vigilante
in the third book in the series david is investigating a series of cases eerily similar in their
brutality and injustice an underground alliance emerges seeking vigilante justice but do
their motives go beyond revenge an insane mind when the water supply of three
residential areas is poisoned leaving countless dead psychologist david joseph suspects
an individual seeking revenge against a world that ignored him david joins forces with law
enforcement in a race against time to stop the killer but can they catch the perpetrator
before another life is lost

the book raises issues of social and scientific backgrounds using the tools of simple
language and ends with a lot of food for thought the reader can empathize with the
characters in the stories and the protagonist always has a social message however the
theme of each story has to be unraveled by the reader the book rakes up the eternal
conundrum of the human mind in different intriguing ways the presentation handles
different themes ranging from soft romance to scientific cloning with smatterings of
comedy and the paradox of feminism and the marriage of mind and matter seem to be the
most important feature set mostly in indian backgrounds the stories seem to laugh at the
irony of situations and readers will see themselves at different phases of their lives

hopefully to laugh at a difficult situation and try to find the other side is the bottom line of the book and the title cest la vie simply justifies this the author has a penchant for the unpredictable which adds freshness to the presentation so read on and just let it be the proceeds from this book will go to the campaign against cancer through the rohit memorial trust visit rohitmemorialtrust.com

advances in textile biotechnology second edition examines the latest in biotechnology for the fiber and textile industry this new edition has been fully revised to include the current essential areas of development in the field covering both natural and synthetic fibers chapters cover the latest technology in bioprocessing for bast fiber pva polyester wool and silk before exploring issues of enzyme stability essential areas of application and development are then considered including biomedical textiles silk materials for biotechnological applications bacterial cellulose the ink jetting of enzymes and the role of enzymes wool and silk fibers containing groundbreaking research this book will be essential reading for manufacturers designers and engineers in the textiles industry textile and fiber scientists and academic researchers and postgraduate students working in the area of textile technology provides a thorough overview of current and future focuses of biotechnology in the fiber and textile industry presents fully revised content with a new focus on biosynthesis and bioprocessing for novel textile fibers both synthetic and natural enables readers to understand and utilize the benefits of biotechnology for the manufacture and production of textiles

advances in modeling and simulation in textile engineering new concepts methods and applications explains the advanced principles and techniques that can be used to solve textile engineering problems using numerical modeling and simulation the book draws on innovative research and industry practice to explain methods for the modeling of all of these processes helping readers apply computational power to more areas of textile engineering experimental results are presented and linked closely to processes and methods of implementation diverse concepts such as heat transfer fluid dynamics three dimensional motion and multi phase flow are addressed finally tools theoretical principles and numerical models are extensively covered textile engineering involves complex processes which are not easily expressed numerically or simulated such as fiber motion simulation yarn to fiber formation melt spinning technology optimization of yarn production textile machinery design and optimization and modeling of textile fabric reinforcements provides new approaches and techniques to simulate a wide range of textile processes from geometry to manufacturing includes coverage of detailed mathematical methods for textiles including neural networks genetic algorithms and the finite element method addresses modeling techniques for many different phenomena including heat transfer fluid dynamics and multi phase flow
