Collection of essays on economic theory. Most of the essays originally appeared in the late 1920s in German journals devoted to the social sciences with the original German language collection being issued in 1933.

The book examines the effect of labour markets on economic performance in an international perspective. Europe, Japan and the US labour markets are an important determinant of the performance of both national economies and individual firms as well as employment rewards such as wages and satisfaction levels. Many countries in Europe suffer from a high level of unemployment. The US economy suffers from low real income growth and widening wage dispersions. The level of worker satisfaction in Japan is relatively low despite her relatively better economic performance. The purpose of this book is to investigate these issues and to provide readers with explanations of these phenomena and the differences in the performance of labour markets in Europe, Japan and the US. The book includes both theoretical and empirical studies of various countries undertaken by leading labour and macro economists and presents several policy suggestions.

Methodology of economics and other social sciences covers the problems in the methodological aspects of economics and other social science disciplines. This book is organized into seven parts encompassing 26 chapters. The first parts review the nature and significance of methodology of economics along with the models and theories in the field. The succeeding parts deal with the verification problems, operational concepts and interpretation of reality in economics. Other parts explore the methodological aspects of other social sciences. The last parts discuss some aspects and applications of economic methodologies. This book will be of value to economists, social scientists and researchers.

This book further develops both the traditional and the behavioural approach to competition law and applies these approaches to a variety of timely issues. It discusses several fundamental questions regarding competition law and economics and explores the applications of competition law and economics. In turn, the book analyses the interplay of intellectual property rights and patents in various aspects of competition law and investigates the impacts that developments in information technology such as big data analytics have on competition law. The book also discusses the impact of energy law reforms on energy markets from a competition law perspective. Competition law is a classic field of economic analysis. This is largely due to the fact that competition law uses terms such as market price and competition and must therefore rely on economic know-how and analyses. In the United States, economic analysis has greatly influenced not just the scholarship on antitrust law but also judicial decisions and agency enforcement. Antitrust law and economics are based on the traditional paradigm of neoclassical economics which relies on the assumption that the market players, i.e. consumers and producers, are rational. This approach to competition law was later received in Europe.

under the banner of a more economic approach for the past two decades behavioural law and economics which seeks to generate better insights into legal phenomena by providing more realistic psychological foundations for economic models and to offer a multitude of applications in legislation and legal adjudication has challenged the traditional economic approach to law in general and more recently to competition law specifically
