robotic animals are nowadays developed for various types of research such as bio inspired robotics biomimetics and animal behavior studies more specifically in the case of collective animal behavior research the robotic device can interact with animals by generating and exploiting signals relevant for social behavior once perceived by the animal society as conspecific these robots can become powerful tools to study the animal behaviors as they can at the same time monitor the changes in behavior and influence the collective choices of the animal society in this book we present novel robotized tools that can integrate shoals of fish in order to study their collective behaviors we used the current state of the art on the zebrafish social behavior to define the specifications of the robots and we performed stimuli analysis to improve their developments bio inspired controllers

were designed based on data extracted from experiments with zebrafish for the robots to mimic the zebrafish locomotion underwater experiments involving mixed groups of fish and robots qualified the robotic system to be integrated among a zebrafish shoal and to be able to influence the collective decisions of the fish these results are very promising for the field of animal robot interaction studies as we showed the effect of the robots in long duration experiments and repetitively with the same order of response from the animals
