this book grew out of lecture notes i used in a course on difference equations that i taught at trinity university for the past five years the classes were largely pop ulated by juniors and seniors majoring in mathematics engineering chemistry computer science and physics this book is intended to be used as a textbook for a course on difference equations at the level of both advanced undergraduate and beginning graduate it may also be used as a supplement for engineering courses on discrete systems and control theory the main prerequisites for most of the material in this book are calculus and linear algebra however some topics in later chapters may require some rudiments of advanced calculus since many of the chapters in the book are independent the instructor has great flexibility in choosing topics for the first one semester course a diagram showing the interdependence of the chapters in the book appears following the preface this book presents the current state of affairs in many areas such as stability z transform asymptoticity oscillations and control theory however this book is by no means encyclopedic and does not contain many important topics such as numerical analysis combinatorics special functions and orthogonal polyno mials boundary value problems partial difference equations chaos theory and fractals the nonselection of these topics is dictated not only by the limitations imposed by the elementary nature of this book but also by the research interest or lack thereof of the author

a book on legal philosophy necessarily focuses attention on law in addition to this focus an introduction to an african legal philosophy focuses attention on philosophy the link between law and philosophy is brought into relief which is done through an african context an attempt is made to spell out what is african about legal philosophy without being cut off of african legal philosophy from non african legal philosophy

the book draws attention to the view that a basic component of african legal philosophy consists of an investigation of what it is to be an african and because an african is a human being among other human beings the investigation is about what it is to be a human being ubuntuism is an african derived word that captures this mode of being human moreover because human beings are cultural beings african cultural context guides the investigation inescapably it is claimed that every legal philosophy is embedded in a culture african legal philosophy is not an exception it is deeply rooted in african culture a culture that is today shaped in part by a european colonialist culture one feature that will strike one as one reads the book is that the book approaches african legal philosophy as a means of decolonization of african culture african legal philosophy can accomplish this intelligently and effectively if it is itself decolonized in doing this it contrasts sharply with mainstream western legal philosophy

mathematics of computing numerical analysis

this edition focuses on the jesuit mission to the hurons which culminated in the martyrdom of fathers brébeuf and lalement and gives a fascinating glimpse of the great lakes indian culture at the time the white man first came
