there is a gap between the extensive mathematics background that is beneficial to biologists and the minimal mathematics background biology students acquire in their courses the result is an undergraduate education in biology with very little quantitative content new mathematics courses must be devised with the needs of biology students in mind in this volume authors from a variety of institutions address some of the problems involved in reforming mathematics curricula for biology students the problems are sorted into three themes models processes and directions it is difficult for mathematicians to generate curriculum ideas for the training of biologists so a number of the curriculum models that have been introduced at various institutions comprise the models section processes deals with taking that great course and making sure it is institutionalized in both the biology department as a requirement and in the mathematics department as a course that will live on even if the creator of the course is no longer on the faculty directions looks to the future with each paper laying out a case for pedagogical developments that the authors would like to see

each chapter has three types of learning aides for students open ended questions multiple choice questions and quantitative problems there is an average of about 50 per chapter there are also a number of worked examples in the chapters averaging over 5 per chapter and almost 600 photos and line drawings

intellectual property ip is a key component of the life sciences one of the most dynamic and innovative fields of technology today at the same time the relationship between ip and the life sciences raises new public policy dilemmas the research handbook on intellectual property and the life sciences comprises contributions by leading experts from academia and industry to provide in depth analyses of key topics including pharmaceuticals diagnostics and genes plant innovations stem cells the role of competition law and access to medicines the research handbook focuses on the relationship between ip and the life sciences in europe and the united states complemented by country specific case studies on australia brazil china india japan kenya south africa and thailand to provide a truly international perspective

the healthcare professionals who save and extend our lives are helpless without the medicines and technologies that have revolutionised medical care but the industry that invents makes and provides these indispensable tools is transforming under
