textbook on modern theoretical chemistry suitable for advanced undergraduate or graduate students

whether you re an avid student or an inquisitive learner the chemistry connection from atoms to applications is your key to unlocking the amazing world of chemistry this book breaks down the basic components of matter atoms molecules and chemical reactions into clear explanations simplifying complicated ideas this book makes the connections demonstrating how chemistry affects everything around us from the smallest particles to the most significant applications in daily life you will teach about the amazing mechanisms that underpin everything in our world including the food we consume the technologies we use and even the surrounding natural beauty through lucid illustrations meaningful comparisons and useful advice the chemistry connection makes science approachable and interesting for all readers this book provides a thorough exploration of the fundamentals of chemistry and its practical applications making it ideal for anybody wishing to brush up on their knowledge develop a better understanding of the topic or just quench their curiosity explore and learn how atom relates to your surroundings

the facts on file dictionary of chemistry examines this popular science subject in clear easy to follow prose

the richly illustrated book comprehensively explains the important principles of diatomic and polyatomic molecules and their spectra in two separate distinct parts the first part concentrates on the theoretical aspects of molecular physics such as the vibration rotation electronic states potential curves and spectra of molecules the different methods of approximation for the calculation of electronic wave functions and their energy are also covered the introduction of basics terms used in group theory and their meaning in molecular physics enables an elegant description of polyatomic molecules and their symmetries molecular spectra and the dynamic

processes involved in their excited states are given its own chapter the theoretical part then concludes with a discussion of the field of van der waals molecules and clusters the second part is devoted entirely to experimental techniques such as laser fourier nmr and esr spectroscopies used in the fields of physics chemistry biology and material science time resolved measurements and the influence of chemical reactions by coherent controls are also treated a list of general textbooks and specialized literature is provided for further reading with specific examples definitions and notes integrated within the text to aid understanding this is suitable for undergraduates and graduates in physics and chemistry with a knowledge of atomic physics and familiar with the basics of quantum mechanics
