this revision of drago's 1977 text reference entitled physical methods in chemistry continues to teach chemists without an advanced mathematical background how to use spectroscopic methods by reading about how problems have been solved with them this edition includes updated material on representations in group theory principles of fourier transform in nmr and ir two dimensional spectroscopy surface techniques and analysis in mass spectroscopy annotation copyrighted by book news inc portland or

this comprehensive series of volumes on inorganic chemistry provides inorganic chemists with a forum for critical authoritative evaluations of advances in every area of the discipline every volume reports recent progress with a significant up to date selection of papers by internationally recognized researchers complemented by detailed discussions and complete documentation each volume features a complete subject index and the series includes a cumulative index as well

now in its 4th edition this book remains the ultimate reference for all questions regarding solvents and solvent effects in organic chemistry retaining its proven concept there is no other book which covers the subject in so much depth the handbook is completely updated and contains 15 more content including new chapters on solvents and green chemistry classification of solvents by their environmental impact and ionic liquids an essential part of every organic chemist's library

solvation ionic and complex formation reactions in non aqueous solvents experimental methods for their investigation presents the available methods and their particular value in investigating solutions composed of non aqueous solvents this book is composed of 10 chapters and begins with a brief description of the complexity of the interactions possible in solutions the subsequent chapters deal with a classification of the solvents and empirical solvent strength scales based on various experimental parameters together with various correlations empirically describing the solvent effect other chapters present the methods for the purification of solvents and ways of checking their purity as well as the individual results achieved during investigations of the solvent effect particularly the general regularities recognized the remaining chapters provide a review of the coordination chemistry of non aqueous solutions this book will prove useful to analytical and inorganic chemists

the most complete resource in functional group chemistry patai s chemistry of functional groups is one of chemistry s landmark book series in organic chemistry an indispensable resource for the organic chemist this is the most comprehensive reference available in functional group chemistry founded in 1964 by the late professor saul patai the aim of patai s chemistry of functional groups is to cover all the aspects of the chemistry of an important functional group in each volume with the emphasis not only on the functional group but on the whole molecule

between june 6 10 1988 the third chemical congress of north america was held at the toronto convention center at this rare gathering fifteen thousand scientists attended various symposia in one of the symposia professor pierre gilles de gennes of college de france was honored as the 1988 recipient of the american chemical society polymer chemistry award sponsored by mobil chemical corporation for professor de gennes this international setting could not be more fitting for years he has been a friend and a lecturer to the world scientific community thus for this special occasion his friends came to recount many of his achievements or report new research findings mostly derived from his theories or stimulated by his thoughts in this volume of proceedings titled new trends in physics and physical chemistry of polymers we are glad to present the revised papers for the symposium and some contributed after the symposium in addition we intend to include most of the lively discussions that took place during the conference this volume contains a total of thirty six papers divided into six parts primarily according to the nature of the subject matter adsorption of colloids and polymers adhesion fractal and wetting of polymers dynamics and characterization of polymer solutions diffusion and interdiffusion of polymers entanglement and reptation of polymer melts and networks phase transitions and gel electrophoresis
