one way to understand the world is by looking at its most basic building blocks all the substances in the world are made up of atoms which interact with each other by exchanging or sharing electrons all atoms can be organized into the periodic table of elements which groups atoms by their chemical properties deep within the atom lies the nucleus which itself contains the elementary particles called quarks by building powerful particle accelerators and enormous detectors physicists are able to probe the most fundamental constituents of matter filled with full color photographs and illustrations and bolstered by its readable text and helpful references the nature of matter third edition is a compelling guide that identifies the essential qualities and characteristics by which matter is recognized

this volume is a selection of invaluable papers by p g de gennes 1991 nobel prize winner in physics which have had a long lasting impact on our understanding of condensed matter important ideas on polymers liquid crystals and interfaces are described the author has added some afterthoughts to the main papers explaining their successes or weaknesses and some current views on each special problem the text is simple and easy to read

this book is a sequel of the physics of quantum well infrared photodetectors 1997 which covered the basic physics of qwips in the intervening 27 years qwp properties pertinent to infrared detection are much better understood and qwp technology has become a mainstream widely deployed infrared technology the main progress is the ability to know the qwp absorption quantum efficiency quantitatively through rigorous electromagnetic modeling the lack of theoretical prediction has impeded qwp development for a long time generally an arbitrary choice of detector structures yields substantial variations of absorption properties and qwp was regarded as a low quantum efficiency detector with the advent of electromagnetic modeling quantum efficiency of any detector geometry can be known exactly and be optimized to attain a large satisfactory value consequently all properties of qwips are predictable not unlike prevailing silicon devices this unique characteristic enables qwp to be the most manufacturable long wavelength infrared technology in mass production this book by k k choi a co inventor of qwips will capture this exciting development based on the materials expounded in the book the reader will know key performance metrics in infrared detection in depth knowledge of qwp material and structural designs array production its application and practical knowledge of electromagnetic modeling in addition the book will describe using micro and nano structures to enhance the emission properties of active and passive optical emitters similar to detectors the application of rigorous electromagnetic modeling to optical emitters is new to the optoelectronic community the resonator pixel emitter structure with its modeling method will no doubt be able to attract substantial academic and industrial attention in years to come
