this third volume of problems from the william lowell putnam competition is unlike the previous two in that it places the problems in the context of important mathematical themes the authors highlight connections to other problems to the curriculum and to more advanced topics the best problems contain kernels of sophisticated ideas related to important current research and yet the problems are accessible to undergraduates the solutions have been compiled from the american mathematical monthly mathematics magazine and past competitors multiple solutions enhance the understanding of the audience explaining techniques that have relevance to more than the problem at hand in addition the book contains suggestions for further reading a hint to each problem separate from the full solution and background information about the competition the book will appeal to students teachers professors and indeed anyone interested in problem solving as a gateway to a deep understanding of mathematics

solve developed models in a numerical fashion designed as an introduction to numerical methods for students a numerical primer for the chemical engineer explores the role of models in chemical engineering combining mathematical correctness model verification with numerical performance model validation this text concentrates on numerical methods and problem solving rather than focusing on in depth numerical analysis it applies actual numerical solution strategies to formulated process models to help identify and

solve chemical engineering problems describe motions with accuracy the book starts with a recap on linear algebra and uses algorithms to solve linear equations nonlinear equations ordinary differential equations and partial differential equations pdes it includes an introductory chapter on matlab basics contains a chapter on the implementation of numerical methods in excel and even adopts matlab and excel as the programming environments throughout the text the material addresses implicit and explicit schemes and explores finite difference and finite volume methods for solving transport pdes it covers the methods for error and computational stability as well as curve fitting and optimization it also contains a case study chapter with worked out examples to demonstrate the numerical techniques and exercises at the end of each chapter that students can use to familiarize themselves with the numerical methods a numerical primer for the chemical engineer lays down a foundation for numerical problem solving and sets up a basis for more in depth modeling theory and applications this text addresses the needs of senior undergraduates in chemical engineering and students in applied chemistry and biochemical process engineering food process engineering

extending explanation based learning by generalizing the structure of explanations presents several fully implemented computer systems that reflect theories of how to extend an interesting subfield of machine learning called explanation based learning this book discusses the need for generalizing explanation structures relevance to research areas outside machine learning and schema based problem solving the result of standard explanation based learning bagger generalization algorithm and empirical analysis of explanation based learning are also elaborated this text likewise covers the effect of increased problem complexity rule access strategies empirical study of bagger2 and related work in similarity based learning this publication is suitable for readers interested in machine learning especially explanation based learning

this is the second volume of my book notes and problems in number theory we focus in this volume on the type of problems that develop the basic and most essential skills which are required for dealing with number theory problems we introduced some new topics in the first chapter i e introduction while the remaining chapters are largely dedicated to solved problems from the main topics of elementary number theory which are introduced in v1 or in the introduction chapter of the present volume we also introduced the subject of cryptography and computing in number theory in the last two chapters so in brief the materials in this volume are largely a mix of applications to the materials of v1 and some theoretical background of new topics as well as applications to the new topics as in my previous books my topmost priority in the structure and presentation is clarity and graduality so that the readers have the best chance of understanding the content with minimum effort and with maximum enjoyment the book can be used as a text or as a reference for an introductory course on number theory and may also be used for general reading in mathematics especially by those who have the hobby of problem solving the book may also be adopted as a source of pedagogical materials which can supplement for instance tutorial sessions e g in undergraduate courses on mathematics or computing or cryptography or related subjects

first published in 1984 in rhetoric of everyday english texts the author uses over 100 short texts from educated writers in all walks of life to demonstrate that when we communicate there is a powerful unspoken linguistic consensus as to what is relevant to our purpose in writing a particular text for a particular audience his aim is to make us aware of how the nature of information offered is compatible with the completeness of very small to very large texts this book is devoted to the important pedagogical problem of accounting usefully for the sequence and contextual meanings of sentences within typically short texts using the simple framework of the consensus dr jordan vividly explains our thinking behind the rhetoric of selecting sequencing and communicating the information relevant to our meta structures in texts he shows that the process of writing short texts is closely related to that of writing summaries and precis and offers his texts as structural models for practice in writing this teach yourself book will be valuable to instructors and teachers in communication studies and journalism
