ukraine and russia are today at opposite points of the political spectrum despite 300 years of contact with russian authoritarian politics ukraine s post independence period has been characterised by pluralism to explain why and how ukraine s and russia s paths diverged this monograph investigates the century long and soviet origins of regionalism in ukraine which the author argues are at the foundation of the modern ukrainian institutional system drawing on unused archival material the book re examines the relationship between moscow kyiv and the ukrainian regions in the period from spring 1917 to summer 1994 to demonstrate how interlinked political and economic incentives and constraints determined the opportunities and institutional interests of both the ukrainian leadership and those of the ukrainian regions and how this institutional framework affected in turn the dynamic of the relationship between the central leadership in moscow the ukrainian leadership and the regions the result weak central authority and pronounced regionalism was ukraine s soviet legacy and the established power of regional clans made post soviet ukrainian politics resistant to russian style authoritarianism even when the soviet centralised party state system collapsed this innovative and wide ranging approach to the history of economic management highlights the importance of considering long term historical trends for understanding both the complicated nature of soviet institutions and their varied and contested legacies across post soviet space

from the soviet perspective eastern europe was the near abroad more accessible than the capitalist west yet also unambiguously foreign observing their western neighbours citizens of the ussr developed new ideas about the role of states borders and national identities in the soviet empire in the near abroad zbigniew wojnowski traces how soviet ukrainian identities developed in dialogue and confrontation with the ussr s neighbours in eastern europe the author aptly challenges the dominant chronologies of late soviet history by arguing that patriotism framed heated debates about the future of the soviet state even amongst the rising tide of cynicism and disengagement from public life wojnowski s insightful analysis illuminates the mental geographies that continue to shape relations and conflicts between russia ukraine and eastern europe to this very

day unlike most other histories of ukraine the near abroad does not reduce ukrainian nationalism to anti soviet views and behaviours

this book proposes contributions to various problems in the field of topological analysis of musical data the objects studied are scores represented symbolically by midi files and the tools used are the discrete fourier transform and persistent homology the manuscript is divided into three parts the first two are devoted to the study of the aforementioned mathematical objects and the implementation of the model more precisely the notion of dft introduced by lewin is generalized to the case of dimension two by making explicit the passage of a musical bar from a piece to a subset of  $\mathbb{Z} \times \mathbb{Z} \times \mathbb{Z}$  which leads naturally to a notion of metric on the set of musical bars by their fourier coefficients this construction gives rise to a point cloud to which the filtered vietorisrips complex is associated and consequently a family of barcodes given by persistent homology this approach also makes it possible to generalize classical results such as lewin's lemma and babitt's hexachord theorem the last part of this book is devoted to musical applications of the model the first experiment consists in extracting barcodes from artificially constructed scores such as scales or chords this study leads naturally to song harmonization process which reduces a song to its melody and chord grid thus defining the notions of graph and complexity of a piece persistent homology also lends itself to the problem of automatic classification of musical style which will be treated here under the prism of symbolic descriptors given by statistics calculated directly on barcodes finally the last application proposes an encoding of musical bars based on the hausdorff distance which leads to the study of musical textures the book is addressed to graduate students and researchers in mathematical music theory and music information research but also at researchers in other fields such as applied mathematicians and topologists who want to learn more about mathematical music theory or music information research
