this text book combines in one volume four major facets of the practical art and theory of piano tuning that students of the art must approach in formal training and explains techniques that typically develop later in professional practice these facets are the traditional model the art itself contemporary scientific descriptions and the concept of musical temperament today the 19th century traditional model of piano tuning still functions as a very basic map for the acoustical territory in which piano tuners work but remains elementary and idealised modern acoustics can go much further in its descriptions than the 19th century model and is used in this book to elucidate the practical art whilst carefully avoiding scientism the book serves as an instruction and reference manual to advanced level on the practical art and its

associated theory and answers common questions raised by students about the actual soundscapes that are encountered in practice
