this book originates from a symposium held at the london hospital medical college under the auspices of applied chromatography systems ltd to discuss the place of hplc in the endocrinology field many of the authors of the present book were speakers at this symposium it seemed to us that many endocrinologists did not at that time fully appreciate the value of hplc and this book was designed to publicise the potential value of this technique a survey of methods used in the steroid field cp 185 confirmed the view that hplc is not being used as widely particularly in research described in clinical journals as might be expected we hope that this book will illustrate albeit in a few selected areas of endocrinology just how versatile and powerful a technique hplc is and encourage those who have not yet experienced it to have a go the beginner does not need to buy expensive instrumentation all that is required is a pump injector column and detector the rest can come later all the authors have practical experience in the use of hplc in the particular area they discuss all readers who discover apparent errors or who feel that the treatment of a topic of interest can be improved upon are encouraged to contact the editors all criticism especially if constructive is welcomed we are still learning and other peoples experience is always valuable

offers a concise background in hplc methodology and includes illustrative examples of some of the key advances made in the receptor field through application of this chromatographic technique a brief historical overview puts into perspective the specific state of the art hplc laboratory applications that are contained in the book technical contributions discuss how best to select the hplc mode for a particular biochemical problem including the most effective use of a particularly sensitive technique microbore hplc for synthesis purification and characterization of synthetic peptides

the powerful efficient technique of high performance liquid chromatography hplc is essential to the standardization of plant based drugs identification of plant material and creation of new herbal medicines filling the void in this critical area high performance liquid chromatography in phytochemical analysis is the first book to give a comp

considerable effort and time is allocated to introducing cell culture and fermentation technology to undergraduate students in academia generally through a range of courses in industrial biotechnology and related disciplines similarly a large number of textbooks are available to describe the applications of these technologies in industry however there has been a general lack of appreciation of the significant developments in downstream processing and isolation technology the need for which is largely driven by the stringent regulatory requirements for purity and quality of injectable biopharmaceuticals this is particularly reflected by the general absence of coverage of this subject in many biotechnology and related courses in educational institutions for a considerable while i have felt that there is increasing need for an introductory text to various aspects of downstream processing particularly with respect to the needs of the biopharmaceutical and biotechnology industry although there are numerous texts that cover various aspects of protein purification techniques in isolation there is a need for a work that covers the broad range of isolation technology in an industrial setting it is anticipated that downstream processing of proteins methods and protocols will play a small part in filling this gap and thus prove a useful contribution to the field it is also designed to encourage educational strategists to broaden the coverage of these topics in industrial biotechnology courses by including accounts of this important and rapidly developing element of the industrial process

the introduction of high performance liquid chromatography hplc to the analysis of peptides and proteins some 25 years ago revolutionized the biological sciences by enabling the rapid and sensitive analysis of peptide and protein structure through the exquisite speed sensitivity and resolution that can be easily obtained today hplc in its various modes has become the pivotal technique in the characterization of peptides and proteins and currently plays a critical role in both our understanding of biological processes and in the development of peptide and protein based pharmaceuticals the number of applications of hplc in peptide and protein purification continues to expand at an extremely rapid rate solid phase peptide synthesis and recombinant dna techniques have allowed the production of large quantities of peptides and proteins that need to be highly purified hplc techniques are also used extensively in the isolation and characterization of novel proteins that will become increasingly important in the postgenomic age the design of multidimensional purification schemes to achieve high levels of product purity further demonstrates the power of hplc techniques not only in the characterization of cellular events but also in the production of peptide and protein based therapeutics hplc continues to be at the heart of the analytical techniques with which scientists in both academia and in industry must arm

themselves to be able to fully characterize the identity purity and potency of peptides and proteins

high performance liquid chromatography of proteins and peptides contains the proceedings of the first international symposium on high performance liquid chromatography of proteins and peptides held in washington d c on november 16 17 1981 the symposium focused on the use of high performance liquid chromatography hplc in the analysis characterization and isolation of peptides and proteins and encompassed six sessions covering size exclusion ion exchange and reversed phase chromatography as well as the use of high performance liquid chromatography hplc in protein structural studies and peptide isolation this book is comprised of 28 chapters and begins with a discussion on the status of high performance ion exchange chromatography of proteins followed by an analysis of peptic fragmentation of human immunoglobulin g using hplc the physicochemical basis of peptide retention with chemically bonded hydrocarbonaceous silicas and the isolation of biologically active peptides from tissue extracts are also examined subsequent chapters explore some additional applications of hplc such as cord blood screening for hemoglobin disorders purification of commercial trypsin and chymotrypsin characterization of human alcohol dehydrogenase isoenzymes and structural studies of neurophysins photolabeled derivatives and biosynthetic precursors this monograph should be of value to students and researchers interested in the use of hplc to study proteins and peptides

high pressure liquid chromatography frequently called high performance liquid chromatography hplc or lc is the premier analytical technique in pharmaceutical analysis and is predominantly used in the pharmaceutical industry written by selected experts in their respective fields the handbook of pharmaceutical analysis by hplc volume 6 provides a complete yet concise reference guide for utilizing the versatility of hplc in drug development and quality control highlighting novel approaches in hplc and the latest developments in hyphenated techniques the book captures the essence of major pharmaceutical applications assays stability testing impurity testing dissolution testing cleaning validation high throughput screening a complete reference guide to hplc describes best practices in hplc and offers tricks of the trade in hplc operation and method development reviews key hplc pharmaceutical applications and highlights current trends in hplc ancillary techniques sample preparations and data handling
