derived from the fourth edition of the well known plastics technology handbook plastics fabrication and recycling presents the molding and fabrication processes of plastics as well as several important fe

this book is the first of its kind to deal with fabrication processes of metal matrix composites mmcs theoretically experimentally systematically and instructively the theoretical bases of fabrication processes and recycling processes of mmcs are established in this volume most other books in the field are concerned with the mechanics of properties which is not easy for readers to grasp and they introduce fabrication processes only as techniques without theoretical discussion because this book provides a clear image of the fabrication processes of mmcs without using complicated mathematics readers can use production theory to create new composites also fundamental concepts of recycling of mmcs are given in this book for the first time so as to meet the demands

for solving environmental problems this work originally was published in japanese and has attained a high reputation among japanese professors and researchers in the field

the proceedings describe recent developments in the field of smelting refining and fabrication of aluminum and magnesium in canada and abroad

this book begins with a discussion of different types of molds and dies it then covers spinning casting reinforcing foaming compounding and coating processes as well as powder molding adhesive bonding and plastics welding techniques the authors also explore the decoration of plastics key aspects of plastics recycling developments in the field and waste recycling problems

a study of how recycling collection programs operate and generate a supply of discarded material for scrap based manufacturers will be of interest to people in many sectors recycling coordinators can identify potential markets for their recovered materials manufacturers will see improved feedstock quality from better educated suppliers entrepreneurs can gain insight into successful operations and economic developers can weigh the benefits a community might reap from such facilities the 24 case studies contained here represent a sample of state of the art scrap based manufacturers tables

this book provides a comprehensive and up to date discussion of breakthroughs on additive manufacturing for plastic material recycling to boost a circular economy it offers new ideas of combining hybridizing processing methods that work as a source of information for manufacturers in making new and strategic product development plans additive manufacturing for plastic recycling efforts in boosting a circular economy provides a critical comprehensive methodological and strong state of the art work on the processing of thermoplastic and thermosetting along with new directions and applications it describes the common and hybrid approaches of recycling processes and includes theoretical and practical ideas of combining hybridizing processing methods with the use of fused deposition modelling which is one of the low cost additive manufacturing techniques the book also discusses mechanical twin screw extrusion followed by case studies for developing hybrid composite structures for biomedical and structural applications recent innovations in melt processing for recycling and the fundaments process parameters investigations and applications for new product development are also presented this book is a first hand reference source of information for academic scholars and commercial manufacturers for making strategic development plans for new product development
