the objective of this book is to look at certain commutative graded algebras that appear frequently in algebraic geometry by studying classical constructions from geometry from the point of view of modern commutative algebra this carefully written book is a valuable source of information offering a careful algebraic systematization and treatment of the problems at hand and contributing to the study of the original geometric questions in greater detail the material covers aspects of rational maps graph degree birationality specialization combinatorics cremona transformations polar maps gauss maps the geometry of fitting ideals tangent varieties joins and secants aluffi algebras the book includes sections of exercises to help put in practice the theoretic material instead of the mere complementary additions to the theory

krichever and novikov introduced certain classes of infinite dimensional lie algebras to extend the virasoro algebra and its related algebras to riemann surfaces of higher genus the author of this book generalized and extended them to a more general setting needed by the applications examples of applications are conformal field theory wess zumino novikov witten models moduli space problems integrable systems lax operator algebras and deformation theory of lie algebra furthermore they constitute an important class of infinite dimensional lie algebras which due to their geometric origin are still manageable this book gives an introduction for the newcomer to this exciting field of ongoing research in mathematics and will be a valuable

source of reference for the experienced researcher beside the basic constructions and results also applications are presented

change is the essence of progress we now stand at the crossroads of our civilization where change is essential in the conduct of our institutions in the plans and models we project for the future and in the very patterns of our thinking if we are to survive as one nation under god with liberty and justice for all opportunity to participate and fulfill the responsibility of building the nation must be available to all citizens in a true republic for the viability of governmental institutions in a modern democratic nation state rests on the diversity of the genius of her citizens and this enables the nation to accommodate herself better to changes of the times but if the nation becomes impervious to change and resistant to modify its institutions to keep in pace with the times then the nation will indeed be doomed to wither and perish history is replete with examples of civilizations that have gone that course it is therefore our responsibility to insure that our government institutions are kept receptive to change and reflective of the needs and concerns of her citizenry in america today economic and social powers generally go to those who can claim a superior education and professional experience as our society and indeed the world becomes increasingly dependent on science and technology education in those fields becomes imperative to the power equation
