and personal incomes as much as individual choice but a major new element in the picture we have developed is the importance of the social or psycho social environment to health for example health in the workplace for most employees certainly office workers is less a matter of exposure to physical health hazards as of the social environment of how supportive it is whether people have control over their work whether their jobs are secure a similar picture emerges in other areas ranging from the health importance of the emotional environment in early childhood to the need for more socially cohesive communities in 1998 the european office of the world health organization launched a campaign to encourage the public and policy makers to take action on the social determinants of health members of the international centre for health and society who advised the who centre for urban health and produced the text for the campaign booklet have now produced social determinants of health to provide the scientific evidence behind the recommendations covering ten key areas of public policy social determinants of health should be read by all those interested in the well being of modern societies it is a must for public health professionals for health promotion specialists and for people working in the many fields of public policy which we now know make such an important contribution to health

since the mid 1970s the ancient view that the determinants of health go well beyond medical care has reemerged in most western democracies yet despite nearly two decades of repeated intellectual efforts to redirect health policy away from curative medicine to more fundamental interventions the task remains largely undone the purpose of this volume is to ask why and to suggest answers and evidence about the determinants of population health that may help redirect national health policies the book provides a conceptual framework that permits the integration of evidence arising from a diverse range of disciplines in particular it highlights observations that have heretofore been difficult to explain within traditional clinical or health promotion understandings of what makes some populations healthier than others individual chapters explore the role of factors as diverse as culture genetic predisposition biological pathways and social and economic environments other chapters discuss how to convert this deepened understanding into changes in health policy this unusual volume is in every sense a collaborative effort the culmination of several years interaction among the members of the population health program of the canadian institute for advanced research c i a r while each chapter has one or more members of this group as designated

authors all chapters reflect the influence of the collaboration as well as of the distinguished c i a r colleagues from many disciplines with whom members have interacted since the group s inception in 1987
