king tyrant a natural history of tyrannosaurus rex is an accessible synthesis of our understanding of the evolutionary position life history and biomechanics of the t rex it explores answers to classic questions such as how fast could it run what were its small arms for or was it a predator

or scavenger at the same time it uncovers new questions like was it one species or many and what did it look like the text also delves into our own relationship with t rex from a historic overview to pop culture references and discusses whether our love for the dinosaur has helped or hindered our research and understanding

mitogen activated protein kinase mapk pathways are evolutionarily conserved in all eukaryotes and allow cells to respond to changes in the physical and chemical properties of the environment and to produce an appropriate response by altering many cellular functions mapks are among the most intensively studied signal transduction systems mapk research is a very dynamic field in which new perspectives are continuously opening to the scientific community importantly many mapk inhibitors have been developed during the last years and are currently being tested in preclinical and clinical assays for inflammatory diseases and cancer treatment in this research topic we have gathered 14 papers covering recent advances in different aspects of the mapk research area that have provided valuable insight into the spatiotemporal dynamics the regulation and functions of mapk pathways as well as their therapeutic potential we hope that this research topic helps readers to have a better understanding of the progresses that have been made recently in the field of mapk signalling a deeper understanding of the these pathways will facilitate the development of innovative therapeutic approaches

how can the tracks of dinosaurs best be interpreted and used to reconstruct them in many mesozoic sedimentary rock formations fossilized footprints of bipedal three toed tridactyl dinosaurs are preserved in huge numbers often with few or no skeletons such tracks sometimes provide the only clues to the former presence of dinosaurs but their interpretation can be challenging how different in size and shape can footprints be and yet have been made by the same kind of dinosaur how similar can they be and yet have been made by different kinds of dinosaurs to what extent can tridactyl dinosaur footprints serve as proxies for the biodiversity of their makers profusely illustrated and meticulously researched noah s ravens quantitatively explores a variety of approaches to interpreting the tracks carefully examining within species and across species variability in foot and footprint shape in nonavian dinosaurs and their close living relatives the results help decipher one of the world s most important assemblages of fossil dinosaur tracks found in sedimentary rocks deposited in ancient rift valleys of eastern north america those often beautifully preserved tracks were among the first studied by paleontologists and they were initially interpreted as having been made by big birds one of which was jokingly identified as noah
