with the inclusion of applications of singular value decomposition svd and principal component analysis pca to image compression and data analysis this edition provides a strong foundation of linear algebra needed for a higher study in signal processing the use of matlab in the study of linear algebra for a variety of computational purposes and the programmes provided in this text are the most attractive features of this book which strikingly distinguishes it from the existing linear algebra books needed as pre requisites for the study of engineering subjects this book is highly suitable for undergraduate as well as postgraduate students of mathematics statistics and all engineering disciplines the book will also be useful to ph d students for relevant mathematical resources new to this edition the third edition of this book includes simultaneous diagonalization of two diagonalizable matrices comprehensive exposition of svd with applications in shear analysis in engineering polar decomposition of a matrix numerical experimentation with a colour and a black and white image compression using matlab pca methods of data analysis and image compression with a list of matlab codes

this is a revised and very expanded version of the previous second edition of the book pharmacokinetic and pharmacodynamic data analysis provides an introduction into pharmacokinetic and pharmacodynamic concepts using simple illustrations and reasoning it describes ways in which pharmacodynamic and pharmacodynamic theory may be used to give insight into modeling questions and how these questions can in turn lead to new knowledge this book differentiates itself from other texts in this area in that it bridges the gap between relevant theory and the actual application of the theory to real life situations the book is divided into two parts the first introduces fundamental principles of pk and pd concepts and principles of mathematical modeling while the second provides case studies obtained from drug industry and academia topics included in the first part include a discussion of the statistical principles of model fitting including how to assess the adequacy of the fit of a model as well as strategies for selection of time points to be included in the design of a study the first part also introduces basic pharmacokinetic and pharmacodynamic concepts including an excellent discussion of effect compartment link models as well as indirect response models the second part of

the text includes over 70 modeling case studies these include a discussion of the selection of the model derivation of initial parameter estimates and interpretation of the corresponding output finally the authors discuss a number of pharmacodynamic modeling situations including receptor binding models synergy and tolerance models feedback and precursor models this book will be of interest to researchers to graduate students and advanced undergraduate students in the pk pd area who wish to learn how to analyze biological data and build models and to become familiar with new areas of application in addition the text will be of interest to toxicologists interested in learning about determinants of exposure and performing toxicokinetic modeling the inclusion of the numerous exercises and models makes it an excellent primary or adjunct text for traditional pk courses taught in pharmacy and medical schools a diskette is included with the text that includes all of the exercises and solutions using winnonlin

this book presents the principle of operation materials used and possible applications of third generation solar cells that are under investigation and have been not commercialized on a large scale yet the third generation photovoltaic devices include promising emerging technologies such as organic dye sensitized perovskite and quantum dot sensitized photocells this book introduces the reader to the basics of third generation photovoltaics and presents in an accessible way phenomena and a diversity of materials used in this book one will find the description of the working principle of new promising solar technologies their advantages and disadvantages prospect applications and preliminary analysis of their impact on the environment the fundamentals of traditional solar cell operation are also included in the book facilitating understanding of new ideas this book is ideal reading for everyone who is interested in novel solutions in photovoltaics as well as applications of nanotechnology photochemistry and materials research

in psychoanalysis classic social psychology and moral living let the conversation begin paul marcus uniquely draws on psychoanalysis and social psychology to examine what affects the ethical decisions people make in their everyday life psychoanalysis traditionally looks at early experiences concepts and drives which shape how we choose to behave in later life in contrast classic social psychology experiments have illustrated how specific situational forces can shape our moral behaviour in this ground breaking fusion of psychoanalysis and social psychology marcus gives a fresh new perspective to this and demonstrates how in significant instances these experimental findings contradict many presumed psychoanalytic ideas and explanations surrounding psychoanalytic moral psychology examining classic social psychology experiments such as asch s line judgement

studies latané and darley s bystander studies milgram s obedience studies mischel s marshmallow experiment and zimbaro s stanford prison experiment marcus pulls together insights and understanding from both disciplines as well as ethics to begin a conversation and set out a new understanding of how internal and external factors interact to shape our moral decisions and behaviours marcus has an international reputation for pushing boundaries of psychoanalytic thinking and with ethics being an increasingly relevant topic in psychoanalysis and our world this pioneering work is essential reading for psychoanalysts psychoanalytic psychotherapists moral philosophy scholars and social psychologists

elements of exterior ballistics long range shooting is a concise but comprehensive instructive book on exterior ballistics applied into long range shooting with small arms the foundations of the book are innovatively related to the exterior ballistics of point mass projectile as well as to the new findings and contemporary ballistics methods presented in my preceding books the book is designed for exterior ballistics professionals amateurs and competitive shooters interested in long range shooting and in general in exterior ballistics though the exterior ballistics applications are related to long range shootings with small arms the reader can easily extend the ballistics techniques to the artillery fire the book has a large number of illustration examples to demonstrate the exterior ballistics solving techniques and to help the readers understand the ballistics concepts and principles as well as the challenging theoretical and practical applications
