constructing test items for standardized tests of achievement ability and aptitude is a task of enormous importance the interpretability of a test's scores flows directly from the quality of its items and exercises concomitant with score interpretability is the notion that including only carefully crafted items on a test is the primary method by which the skilled test developer reduces unwanted error variance or errors of measurement and thereby increases a test score's reliability the aim of this entire book is to increase the test constructor's awareness of this source of measurement error and then to describe methods for identifying and minimizing it during item construction and later review persons involved in assessment are keenly aware of the increased attention given to alternative formats for test items in recent years yet in many writers' zeal to be curriculum relevant or authentic or realistic the items are often developed seemingly without conscious thought to the interpretations that may be garnered from them this book argues that the format for such alternative items and exercises also requires rigor in their construction and even offers some solutions as one chapter is devoted to these alternative formats this book addresses major issues in constructing test items by focusing on four ideas first it describes the characteristics and functions of test items a second feature of this book is the presentation of editorial guidelines for writing test items in all of the commonly used item formats including constructed response formats and performance tests a third aspect of this book is the presentation of methods for determining the quality of test items finally this book presents a compendium of important issues about test items including procedures for ordering items in a test ethical and legal concerns over using copyrighted test items item scoring schemes computer generated items and more

this book evolved from notes originally developed for a graduate course best approximation in normed linear spaces that i began giving at penn state university more than 25 years ago it soon became evident that many of the students who wanted to take the course including engineers computer scientists and statisticians as well as mathematicians did not have the necessary prerequisites such as a working knowledge of lp spaces and some basic functional analysis today such material is typically contained in the first year graduate course

in analysis to accommodate these students i usually ended up spending nearly half the course on these prerequisites and the last half was devoted to the best approximation part i did this a few times and determined that it was not satisfactory too much time was being spent on the presumed prerequisites to be able to devote most of the course to best approximation i decided to concentrate on the simplest of the normed linear spaces the inner product spaces since the theory in inner product spaces can be taught from first principles in much less time and also since one can give a convincing argument that inner product spaces are the most important of all the normed linear spaces anyway the success of this approach turned out to be even better than i had originally anticipated one can develop a fairly complete theory of best approximation in inner product spaces from first principles and such was my purpose in writing this book

a realistic approach to the study of mechanisms the book addresses real functional group chemistry with an emphasis on the biological environmental and medical applications of organic chemistry

this reference book contains a detailed description of the rules in force referring to case law preparatory texts commentaries and memoranda the basis of the book is formed by the community customs code articles of the code and the implementing provisions are discussed in an integrated manner this guide not only deals with customs rules and the payment of import or export duties but also discusses the consequences for vat purposes of the various customs approved treatment or uses
