translated from the original german by peter hilton and jean pedersen the 99 points of intersection presented here were collected during a year long search for surprising concurrence of lines for each example we find compelling evidence for the sometimes

startling fact that in a geometric figure three straight lines or sometimes circles pass through one and the same point of course we are familiar with some examples of this from basic elementary geometry the intersection of medians altitudes angle bisectors and perpendicular bisectors of sides of a triangle here there are many more examples some for figures other than triangles some where even more than three straight lines pass through a common point the main part of the book presents 99 points of intersection purely visually they are developed in a sequence of figures many without caption or verbal commentary in addition the book contains general thoughts on and examples of the points of intersection as well as some typical methods of proving their existence many of the examples shown in the book were inspired by questions and suggestions made by students and high school teachers several of those examples have not only a geometrical but also an intriguing aesthetic aspect the book addresses high school students and students at the undergraduate level as well as their teachers but will appeal to anyone interested in geometry

each teachers edition focuses on a specific theme and depending upon the grade level contains explicit systematic instruction in phonemic awareness print and book awareness alphabetic knowledge phonics fluency word structure vocabulary comprehension spelling and writing appropriate to the specific grade level

three years before his death michel foucault delivered a series of lectures at the catholic university of louvain that until recently remained almost unknown these lectures which focus on the role of avowal or confession in the determination of truth and justice provide the missing link between foucault's early work on madness delinquency and sexuality and his later explorations of subjectivity in greek and roman antiquity ranging broadly from homer to the twentieth century foucault traces the early use of truth telling in ancient greece and follows it through to practices of self examination in monastic times by the nineteenth century the avowal of wrongdoing was no longer sufficient to satisfy the call for justice there remained the question of who the criminal was and what formative factors contributed to his wrong doing the call for psychiatric expertise marked the birth of the discipline of psychiatry in the nineteenth and twentieth centuries as well as its widespread recognition as the foundation of criminology and

modern criminal justice published here for the first time the 1981 lectures have been superbly translated by stephen w sawyer and expertly edited and extensively annotated by fabienne brion and bernard e harcourt they are accompanied by two contemporaneous interviews with foucault in which he elaborates on a number of the key themes an essential companion to discipline and punish wrong doing truth telling will take its place as one of the most significant works of foucault to appear in decades and will be necessary reading for all those interested in his thought
