in connection to nature deep ecology and conservation social science human nature bonding and protecting the natural world christian diehm analyzes the relevance of the philosophy of deep ecology to contemporary discussions of human nature connectedness focusing on deep ecologists notion of identification with nature diehm argues that deep ecological theory is less conceptually problematic than is sometimes thought and offers valuable insights into what a sense of connection to

nature entails what its attitudinal and behavioral effects might be and how it might be nurtured and developed this book is closely informed by and engages at length with conservation social science which diehm draws on to assess the claims of deep ecology theorists resolve long standing problems associated with their work investigate the impacts of time outdoors on human nature bonding and critically review the biophilia hypothesis emphasizing the foundational role of ecologically inclusive identities in pro environmental attitudes and behaviors diehm demonstrates that having a sense of connection to nature is more important than many environmental advocates have realized and that deep ecology has much to add to the increasingly pressing conversations about it

critically surveying various approaches to christian ecological ethics alongside the vexing moral ambiguities of the anthropocene ecology of vocation offers an integrative approach to responsible living vis à vis one of protestantism s key theological resources the doctrine of vocation drawing on h richard niebuhr s germinal ethical framework with a decidedly ecofeminist perspective kiara a jorgenson demonstrates how vocation s emphasis on right relationship practically speaks to the embodied realities of planetary interrelatedness by excavating the ecological promise of the early reformers democratized renderings of calling and linking their concerns to the contemporary context she argues that vocation cannot be reduced to the particular aim of monetized work nor to an elitist escape from it rather vocation must be recast as the dynamic and vibrant space among the myriad roles any of us inhabits at any given time in a particular place when understood in this light vocation signals much more than a job a passion or a quest for self discovery an alternative understanding of vocation s very ecology can extend christian conceptions of the neighbor beyond the human and lead the church to more faithfully pursue lives characterized by humility restraint wisdom justice and love

poole harbour is protected and recognised nationally and internationally for its ecological importance however it has also been classified as polluted and eutrophic these twin designations protected yet polluted exemplify the condition of many estuaries making poole harbour an ideal subject for elucidating the circumstances behind this apparent paradox the outcome of a conference entitled spotlight on poole harbour environment economics organised by the poole harbour study group this book comprises four main parts part i background provides a broad introduction to the harbour in terms of its pre historical and historical significance for human communities and gives a conceptual overview of its modern character and uses part ii

ecology contains chapters ranging from plankton to marine mammals the subsequent parts focus on industries dependent on the biological and chemical ecological services of the estuary part iii fisheries covers recreational and commercial fishing and aquaculture examining economic value and key shellfish species part iv water quality addresses those industries that require the harbour to remediate various effluents as well as some of the environmental consequences and noteworthy efforts to reduce such impacts part v conclusion by the editors examines certain general shortcomings of environmental legislation and regulation manifest in the case of poole harbour a central concern throughout is the question of sustainable development in coastal and marine contexts making this wide ranging study relevant well beyond the bounds of its primary geographical focus

takes the singular eco catastrophic age of man and redefines this epoch we live in a new world the anthropocene the age of man is defined in many ways and most dramatically through climate change mass extinction and human marks in the geological record ideas of the anthropocene spill out from the geophysical sciences into the humanities social sciences the arts and mainstream debates but it s hard to know what the new coinage really means break up the anthropocene argues that this age should subvert imperial masculinity and industrial conquest by opening up the plural possibilities of anthropocene debates of resilience adaptation and the struggle for environmental justice forerunners ideas first short books of thought in process scholarship where intense analysis questioning and speculation take the lead
