this brand new principles of economics text is the most exciting new entry in years written by well known and well respected economists bob frank ben bernanke lars osberg dalhousie university melvin cross dalhousie university and brian maclean laurentian university the text seeks to teach introductory students the core economic concepts the essence of economics without overwhelming them with details a well articulated short list of core principles is introduced and reinforced by illustrating and applying each principle in several contexts and then asking students to work exercises to see what they have learned the text seeks to create economic naturalists that is after reading the text

students will ask and answer questions about their economic environment for example students will see braille dots on drive up ATMs and ask why they are there peppered with such thought provoking examples Frank Bernanke not only engage students but teaches them to see each feature of their economic landscape as the reflection of an implicit or explicit cost benefit calculation

Although many millions of dollars are spent each year on introductory economics instruction in American colleges and universities the return on this investment has been disturbingly low studies have shown for example that several months after having taken a principles of economics course former students are no better able to answer simple economics questions than others who never even took the course most students it seems leave our introductory courses without having learned even the most important basic economic principles

With an accessible approach the third European edition of Principles of Economics provides students with the tools to analyze current economic issues the book is underpinned by a focus on seven core principles which help students to make the link between economic theory and practice the economic naturalist approach supported by exercises problems and examples encourages students to employ economics principles to understand and explain the world around them developed from the well regarded US textbook by Frank and Bernanke it presents an intuitive approach to economics and is suitable for all students taking a principles of economics course

In recent years innovative texts in mathematics science foreign languages and other fields have achieved dramatic pedagogical gains by abandoning the traditional encyclopedic approach in favor of attempting to teach a short list of core principles in depth two well respected writers and researchers Bob Frank and Ben Bernanke have shown that the less is more approach affords similar gains in introductory economics although a few other texts have paid lip service to this new approach Frank Bernanke is by far the best throughout and the best executed principles text in this mold avoiding excessive reliance on formal mathematical derivations it presents concepts intuitively through examples drawn from familiar contexts the authors introduce a coherent short list of core principles and reinforce them by illustrating and applying each in numerous contexts students are periodically asked to apply these principles and to answer related questions and exercises Frank Bernanke also encourages students to become economic naturalists by employing basic economic principles to understand and explain what they observe in the world around them an economic naturalist understands for example that infant safety seats are required in cars but not in airplanes because the marginal cost of space to accommodate these seats is typically zero in cars but often hundreds of dollars in airplanes such examples engage student interest while teaching them to see each feature of their economic landscape as the reflection of an implicit or explicit cost benefit calculation
