climate change has been the subject of thousands of books and magazines scientific journals and newspaper articles daily it s a subject that can be very political and emotional often blurring the lines between fact and fiction the vast majority of research studies projections and recommendations tend to focus on the human influence on climate change and global warming as the result of co2 emissions often to the exclusion of other threats that include population growth and the stress placed on energy sources due to emerging global affluence climate vulnerability five volume set seeks to strip away the politics and emotion that surround climate change and will assess the broad range of threats using the bottom up approach including co2 emissions population growth emerging affluence and many others to our five most critical resources water food ecosystems energy and human health inclusively determining what these threats are

while seeking preventive measures and adaptations is at the heart of this unique reference work takes a bottom up approach addressing climate change and the threat to our key resources at the local level first and globally second providing a more accurate and inclusive approach includes extensive cross referencing which is key to readers as new connections between factors can be discovered cuts across a number of disciplines and will appeal to biological science earth environmental science ecology and social science comprehensively addressing climate change and other threats to our key resources from multiple perspectives

ecological restoration is as essential as sustainable development for the health of the biosphere restoration however has been a low priority of most countries environmental laws which tend to focus narrowly on rehabilitation of small discrete sites rather than the more ambitious recovery of entire ecosystems and landscapes through critical theoretical perspectives and topical case studies this book s diverse contributors explore a more ambitious agenda for ecological restoration law not only do they investigate current laws and other governance mechanisms they also consider the philosophical and methodological bases for the law to take ecological restoration more seriously through exploration of themes relating to time space geography semiotics social justice and scientific knowledge this book offers innovative and critical insights into ecological restoration law

resource management in the united states is undergoing a fundamental change traditional sustained yield approaches that focus on commodity production and human resource use are steadily giving way to ecological approaches often referred to as ecosystem management that have long term ecological sustainability as their primary goal to achieve that goal ecosystem management emphasizes socially defined goals and objectives integrated and holistic science collaborative decision making and adaptable institutions political considerations are an essential component of ecosystem management yet its socio political context has been largely ignored by those studying and writing on the subject the politics of ecosystem management is the first book to focus entirely on the political challenges facing ecosystem management as it moves from theory to practice the authors examine the history of natural resource management in the united states the theory behind ecosystem management potential inconsistencies and contradictions in the themes of ecosystem management political philosophies that

undergird traditional resource management alternative political principles inherent in ecosystem management opportunities and barriers for achieving collaborative ecosystem management the politics of ecosystem management considers the sweeping and profound changes that will be required of the american governance system its political philosophy institutions notions of citizenship and politics as well its resource management practices if the shift to ecosystem management is to be realized it is a lucid and accessible volume that represents a vital contribution to the literature for students researchers and professionals involved with any aspect of developing and implementing ecosystem based approaches to resource management

this edited work provides policy institutional and governance recommendations in response to the mea finding that humans have degraded ecosystems services at a faster rate and on a larger scale than at any time in human history this book focuses on ecosystems services as the benefits people receive from nature

in a society more concerned with how to cope with existential dread than how to make actionable changes to save the planet a surprisingly large number of americans identify as environmentalists what can individual people do to lessen human impacts on the planet this is not an easy question most research is focused on large scale changes that go beyond anything an individual can accomplish and people are left feeling defeated rather than inspired to make changes in their everyday lives change starts at home and f stuart chapin iii has assembled a book for people who want to learn more about global changes and more importantly what they can do about them starting today grassroots stewardship approaches our current situation with an educated sense of hope and positivity this book emphasizes actions by individuals rather than governmental or corporate institutions to trigger transformational change readers will learn what they can do to most significantly transform their communities and the planet with more sustainable pathways
