the results of a special research project carried out for molecular approaches to non equilibrium process in solution were presented during the 42nd Yamada conference on structure fluctuation and relaxation in solution which was held from 11-15 December 1994. The following topics were discussed at the conference: 1. solvation dynamics 2. relaxation fluctuation and reaction dynamics 3. dynamic structure and reaction mechanisms in solutions. These topics were the main concern of this conference.

An excellent resource for all graduate students and researchers using electrochemical techniques. After introducing the reader to the fundamentals, the book focuses on the latest developments in the techniques and applications in this field. This second edition contains new material on environmentally friendly solvents such as room temperature ionic liquids.

You cannot expect to succeed in a serious chemistry course without solving problems which are universally used to illustrate concepts and to test understanding. This manual offers detailed solutions to all of the odd-numbered problems in the text to assist you in working through them.

The monograph is devoted to the relatively new and fast-developing field of cluster physics. It is based on talks given at the cluster workshops which were held in Pushchino in 1995 and 1996. The reports focus not only on the fundamental physical properties of clusters such as their geometric and electronic structure as well as optical, thermal, and magnetic properties but also on a broad spectrum of their potential applications. These include nucleation and growth of small particles, fabrication of new materials with predefined properties, cluster assembly and nanostructures, some aspects of simulations and calculations of small particles and clusters are also discussed. We hope that our monograph will be of interest to a broad range of readers who will be able to sense the excitement of the talks.
