A deep and widespread crisis affects modern economic theory, a crisis that derives from the absence of a vision, a set of widely shared political and social preconceptions on which all economics ultimately depends. This absence in turn reflects the collapse of the Keynesian view that provided such a foundation from 1940 through the early 1970s, comparable to earlier visions provided by Smith, Ricardo, Mill, and Marshall. The unraveling of Keynesianism has been followed by a division into discordant and ineffective camps whose common denominator seems to be their shared analytical refinement and lack of practical applicability. This provocative analysis attempts both to describe this state of affairs and to suggest the direction in which economic thinking must move if it is to regain the relevance and remedial power it now pointedly lacks.

Principles of Economics, first published in 1890, went through eight editions and is considered the most important treatise of the 19th century and beyond. It gave some landmark concepts like consumer surplus, producer surplus, price elasticity of demand, and the idea of three periods: viz. market period, short period, and long period. The concept of national dividend given in the *Principles* is not a mere academic toy but a practical instrument of great power designed for service in the concrete solution of social problems. Marshall's theoretic discussion follows the lines of the mathematical treatment of Cournot and others, more particularly in his discussion of the doctrines of value, cost, exchange, and distribution. He has used diagrams and formulae for purposes of illustration and for greater precision of statement. **Book Jacket**
