There are many urgent problems in arid land hydrogeology, and it is these issues which are tackled in this volume. On desert environments, the UAE-Japan Symposia provide a venue for the exchange of expertise confronting such problems as purification, usage, and management of groundwater, the assessment and protection of sustainable water resources, a

Semigroups of bounded operators and second order elliptic and parabolic partial differential equations aims to propose a unified approach to elliptic and parabolic equations with bounded and smooth coefficients. The book will highlight the connections between these equations and the theory of semigroups of operators while demonstrating how the theory of semigroups represents a powerful tool to analyze general parabolic equations. Features useful for students and researchers as an introduction to the field of partial differential equations of elliptic and parabolic types introduces the reader to the theory of operator semigroups as a tool for the analysis of partial differential equations.

this manual is designed to train operators in the practical hands on aspects of safely operating and maintaining small wastewater collection treatment and disposal systems it focuses on the knowledge and skills needed to operate and maintain several types of package wastewater treatment processes it also describes various effluent disposal options how to perform basic lab procedures and how to administer a small wastewater system

methyl tert butyl ether mtbe is currently the leading contaminant of groundwater in the united states the widespread presence of mtbe along with its degradation by product tert butyl alcohol tba in groundwater has created great concern in the scientific community because mtbe and tba are suspected as possible human carcinogens in this research the degradation of mtbe and tba in aqueous solution by o₃ uv process has been investigated laboratory studies were conducted using a semi batch reactor under various experimental conditions i e incident uv light intensity influent ozone gas concentration and water quality in terms of varying bicarbonate concentration furthermore the o₃ uv process was modeled by using oxalic acid as a probe chemical oxalic acid was oxidized by o₃ uv process under various experimental conditions and the model successfully predicted the residual concentration of oxalic acid in order to understand the degradation mechanisms of mtbe and tba a comprehensive kinetic model that describes the degradations of mtbe tba and their intermediates by o₃ uv process was proposed the model was calibrated using experimental data on mtbe and tba spiked in synthetic solution an attempt was made to verify the kinetic model using different sets of experimental data the model predicted well the removal of mtbe and tba however the accumulation and decay of some primarily intermediates were predicted with slight variations finally real groundwater samples contaminated with mtbe and tba were oxidized by o₃ uv process under various experimental conditions it was observed that the removal rate of mtbe and tba was reduced by the presence of other gasoline components such as btex furthermore for groundwater sample without iron the kinetic model predicted the degradation of mtbe as well as accumulation and decay of reaction intermediates with slight variations in

conclusion this research provides valuable information on the degradation mechanisms of mtbe tba and their intermediates the o33 uv process was very successful in degrading mtbe and tba in aqueous solution moreover it was observed that the reaction intermediates react well in the o33 uv process and complete mineralization could be achieved if desired
