sensible distances and which leave the body in its primitive state as soon as their action has ceased a piece of soft iron is attracted by the magnet before contact is established and when under the magnetic influence is capable of attracting other soft iron in its turn the action of the magnet has made the iron itself magnetic but it immediately loses this property when the magnet is withdrawn and further this momentary change in property has brought about no alteration in the intimate nature of the iron it is found after the experiment in precisely the same condition as before about the publisher forgotten books publishes hundreds of thousands of rare and classic books find more at [forgottenbooks.com](http://forgottenbooks.com) this book is a reproduction of an important historical work forgotten books uses state of the art technology to digitally reconstruct the work preserving the original format whilst repairing imperfections present in the aged copy in rare cases an imperfection in the original such as a blemish or missing page may be replicated in our edition we do however repair the vast majority of imperfections successfully any imperfections that remain are intentionally left to preserve the state of such historical works
