the launch of a new book series is always a challenging event not only for the  
editorial board and the publisher but also and more particularly for the first author  
both the editorial board and the publisher are delighted that the first author in this  
series is well able to meet the challenge professor freudenthal needs no  
introduction to anyone in the mathematics education field and it is particularly fitting  
that his book should be the first in this new series because it was in 1968 that he  
and reidel produced the first issue of the journal educational studies in  
mathematics breaking fresh ground is therefore nothing new to professor  
freudenthal and this book illustrates well his pleasure at such a task to be strictly  
correct the ground which he has broken here is not new but as with mathematics as  
an educational task and weeding and sowing it is rather the novelty of the manner  
in which he has carried out his analysis which provides us with so many fresh

perspectives it is our intention that this new book series should provide those who work in the emerging discipline of mathematics education with an essential resource and at a time of considerable concern about the whole mathematics curriculum this book represents just such a resource alan j bishop managing editor vii a look backward and a look forward men die systems last

in this thesis autonomous units are presented as a concept to model autonomous processes autonomous units form a community with a common environment in which they act and which they transform they are based on rules the applications of which yield changes in the environment they are also equipped with an individual goal which they try to accomplish by applying their rules a control condition enables autonomous units at any time and in any situation to select the rule that is actually applied from the set of all applicable rules the formal semantics of a community as a whole and of each of its members is defined in two stages in the sequential case only one unit can act at a time and the rule application of the involved units are interleaved with each other in order to illustrate the sequential case the formal concept of petri nets is modeled by a community of autonomous units here every transition of the petri net is realized as one autonomous unit in the parallel case a number of actions take place in parallel at the same time as an example a colony of ants with a very simple foraging strategy is presented in this case the parallel actions still occur in sequential order so some preliminary ideas of a third stage are given in this concurrent semantics the autonomous units may act independently without chronological relations between them unless a causal relationship demands a certain order of actions as further illustration communities of autonomous units are applied to the domain of transport logistics a transport network is modeled which consists of depots and their connections unit loads and trucks the load units have to be transported from a source depot to a target depot by trucks here the

trucks as well as the load units are modeled as autonomous units how the unit loads will actually be transported by the trucks results from negotiations between all involved entities two case studies that have actually been implemented using the graph transformation tool grgen are presented in detail the first case study deals with a model of the board game ludo and the sequential process semantics of the corresponding community the second case study deals with a model of a foraging ant colony and the parallel process semantics of the corresponding community some fundamental aspects of the semantics of rule based systems in relation to the semantics of visual models are discussed which form the conceptional background of this thesis since control conditions are an essential part of the modeling with autonomous units their efficient handling is the main challenge regarding the creation of a software tool so some seemingly simple control conditions are investigated with respect to implementation
