solutions manual is a companion book to the fundamentals of solidification 5th edition offering model solutions to 133 problems exercises the 5th edition of fundamentals of solidification 2023 includes new contributions on phase field modelling and a new 8th chapter on microstructure selection it explains how to combine the concepts of the seven preceding chapters of the book so as to model the real microstructures that form during complex processes such as additive manufacturing which are still a challenge or are out of reach of numerical simulation this solutions manual together with the 5th edition of the main text will offer its readership a good start in the field and prepare them for tackling more involved treatments of solidification fundamentals of solidification 5th fully revised edition

this text is in a flexible one semester text that spans a variety of topics in the basic theory as well as applications of differential equations

the volume covers two aspects of thorium solution chemistry chromatographic methods and the chemistry in nonaqueous solutions chromatographic methods find broad application in the analytical chemistry of thorium notably in the field of radiochemistry where unweighable or trace amounts of thorium have to be determined electrolytic methods like migration are used to separate ions to study the complexing behaviour of thorium in solution accordingly these methods have been adopted as standard procedures in radioanalytical laboratories from mining industry to reprocessing plants and research laboratories they have the advantage that only trace amounts are needed to obtain results so that radiation shielding and health considerations are less important the behaviour of Th^{4+} in aqueous solution at pH 3 is dominated by hydrolysis studies in nonaqueous solutions avoid this complication the complexing behaviour towards donor ligands and the isolation of compounds like $\text{ThX}_2 \cdot 2\text{L}$ is a feature of this type of chemistry most organometallic compounds can be obtained only in nonaqueous solutions furthermore the amount of thorium extracted from aqueous solution into organic solutions depends strongly on the behaviour of the Th^{4+} ion and its complexes in the organic phase therefore the studies of the reactions of thorium ions in organic solutions are of some importance for several industrial processes such as the recovery of thorium from mining solutions by extraction with tributyl phosphate (TBP) to form $\text{Th}(\text{NO}_3)_4 \cdot 2\text{TBP}$
