authentication and key establishment (AKE) in computer and communication networks refers to a process of enabling a group of two or more members to communicate securely with the confidence that no non member can legibly eavesdrop or pretend to be a member of the group the need for such a process can be realized in a variety of applications in computer and communication networks where two or more entities need to communicate over shared communication media the fundamental question addressed by this dissertation is how to enable two entities to communicate securely the computing and communication environments affect the overall design of the AKE solution since these environments vary from powerful computing devices on high bandwidth networks to much smaller low power sensor devices on low bandwidth wireless networks there is no single solution no silver bullet to solve the problem in every environment this dissertation identifies the major constraints in typical environments and proposes solutions for each of the scenarios meeting the constraints in this research we first broadly classify the environments in three scenarios on the basis of available computation power energy and communication bandwidth 1 high end to high end communication 2 high end to low end communication 3 low end to low end communication we then propose solutions to AKE and related problems for the first scenario we propose the following solutions a efficiently integrating diffie hellman key exchange protocol into digital signature algorithm b a new design for discrete logarithm based factoring based and elliptic curve based AKE protocol using single cryptographic assumption c a new design for digital certificates to facilitate AKE for the second scenario we propose a solution to use a combination of symmetric key cryptography and public key cryptography to design efficient and secure AKE protocol in a wireless environment for the third scenario we propose the following solutions a a modeling scheme for pairwise key establishment for random key distribution in large scale sensor networks b a scheme for key predistribution and shared key discovery in sensor networks c a source routing based scheme for pairwise key establishment in sensor networks
