ever since newton created dynamics there has been controversy about its foundations are space and time absolute do they form a rigid but invisible framework and container of the universe or are space time and motion relative if so does newton s framework arise through the influence of the universe at large as ernst mach suggested einstein s aim when creating his general theory of relativity was to demonstrate this and thereby implement mach s principle however it is widely believed that he achieved only partial success this question of whether motion is absolute or relative has been a central issues in philosophy the nature of time has perennial interest current attempts to create a quantum description of the whole universe keep these issues at the cutting edge of modern research

written by the world's leading expert on mechanics principle the discovery of dynamics is a highly original account of the development of notions about space time and motion widely praised in its hardback version it is one of the fullest and most readable accounts of the astronomical studies that culminated in kepler's laws of planetary motion and of the creation of dynamics by galileo descartes huygens and newton originally published as absolute or relative motion vol 1 the discovery of dynamics cambridge the discovery of dynamics provides the technical background to barbour's recently published the end of time in which he argues that time disappears from the description of the quantum universe

the seventh book of pappus's collection his commentary on the domain or treasury of analysis figures prominently in the history of both ancient and modern mathematics as our chief source of information concerning several lost works of the greek geometers euclid and apollonius and as a book that inspired later mathematicians among them viete newton and chasles to original discoveries in their pursuit of the lost science of antiquity this presentation of it is concerned solely with recovering what can be learned from pappus about greek mathematics the main part of it comprises a new edition of book 7 a literal translation and a commentary on textual historical and mathematical aspects of the book it proved to be convenient to divide the commentary into two parts the notes to the text and translation and essays about the lost works that pappus discusses the first function of an edition of this kind is not to expose new discoveries but to present a reliable text and organize the accumulated knowledge about it for the reader's convenience nevertheless there are novelties here the text is based on a fresh transcription of vat gr 218 the archetype of all extant manuscripts and in it i have adopted numerous readings on manuscript authority or by emendation that differ from those of the old edition of hultsch moreover many difficult parts of the work have received little or no commentary hitherto
