during the obama years an asymmetrical media war was waged to control the critical first draft of american history there is no fair way to record that history without first acknowledging the war the field of battle shaped up as follows on the right the alternative conservative media and the responsible right occasionally working together often working at odds on the left the mainstream media the social media giants hollywood broadway the federal bureaucracies the national security apparatus and what ray bradbury would call firemen the virtual book burners amateur and professional rarely at odds

these forces routinely worked together to amplify what obama adviser ben rhodes famously called the white house s messaging campaign money resources and power overwhelmingly favored the left but the right had the equalizer on its side the truth

jonathan gruber s market leading public finance and public policy was the first textbook to truly reflect the way public policy is created implemented and researched like no other text available it integrated real world empirical work and coverage of transfer programs and social insurance into the traditional topics of public finance by augmenting the traditional approach of public finance texts with a true integration of theory application and evidence public finance and public policy engages students like no other public finance text thoroughly updated this timely new edition gives students the basic tools they need to understand the driving issues of public policy today including healthcare education global climate change entitlements and more

the goal of the mirrlees review has been to identify what makes a good tax system for an open developed economy in the 21st century and to suggest how the uk tax system could be reformed to move in that direction as an integral part of the review this volume brings together thirteen studies of different dimensions of tax design plus associated commentaries these were commissioned from ifs researchers and other international experts to be of interest and value in their ownright as well as to provide inspiration for the final report of the review which is published as a separate volume tax by design the commission s work was directed by tim besleyrichard blundellmalcolm gammiejames poterbathe commission s editorial team stuart adamstephen bondrobert chotepaul johnsongareth myles

we are currently engaged in the most fundamental debate about the role of government in decades and who better than jonathan gruber to guide students through the particulars in the new edition of his best selling text public finance and public policy 6e the new edition details ongoing policy debates with special focus on the largest tax reform in 30 years new topics include universal basic income the legalisation of weed and congestion pricing and of course there is an extensive in depth discussion of the debate over health care at the heart of this new edition is the author s belief that at no other time has it been so important to know the facts to distinguish facts from falsehoods and to be thinking clearly about problem policy and politics the sixth edition delivers on all counts

the untold story of how america once created the most successful economy the world has ever seen and how we can do it again the american economy glitters on the outside but the reality is quite different job opportunities and

economic growth are increasingly concentrated in a few crowded coastal enclaves corporations and investors are disproportionately developing technologies that benefit the wealthiest americans in the most prosperous areas and destroying middle class jobs elsewhere to turn this tide we must look to a brilliant and all but forgotten american success story and embark on a plan that will create the industries of the future and the jobs that go with them beginning in 1940 massive public investment generated breakthroughs in science and technology that first helped win wwii and then created the most successful economy the world has ever seen private enterprise then built on these breakthroughs to create new industries such as radar jet engines digital computers mobile telecommunications life saving medicines and the internet that became the catalyst for broader economic growth that generated millions of good jobs we lifted almost all boats not just the yachts jonathan gruber and simon johnson tell the story of this first american growth engine and provide the blueprint for a second it s a visionary pragmatic sure to be controversial plan that will lead to job growth and a new american economy in places now left behind

although there is a sizeable literature on the effect of private school attendance on academic student outcomes the number of studies that investigate the impact of school sector on non academic outcomes is limited using a rich data set we analyze the impact of catholic school attendance on the likelihood that teenagers use or sell drugs commit property crime have sex join gangs attempt suicide and run away from home we employ propensity score matching methods to control for the endogeneity of school choice catholic school attendance reduces the propensity to use cocaine and to have sex for female students however it increases the propensity to use and sell drugs for male students

the us federal system provides great potential for estimating the effects of policy on behavior there are numerous empirical studies that exploit variation in policies over space and time in pursuing this line of enquiry the issue of policy endogeneity is central if state policy making is purposeful action responsive to economic and political conditions within the state then it may be necessary to identify and control for the forces that lead policies to change if one wishes to obtain unbiased estimates of a policy s incidence the aim of this paper is to investigate how recognition of policy endogeneity affects attempts to analyze policy incidence throughout we take a specific context workers compensation benefits we contrast the use of differences in differences estimation where a comparison is made between a group affected by the policy change and a control group with instrumental variables estimation when political variables are used as instruments although conclusions drawn must be confined to the example at hand we believe that the analysis illustrates why it may be important to consider the implications of policy endogeneity more generally

the paper reviews the recent literature on exchange rate target zones and on speculative attacks on fixed exchange rates the influential krugman model of exchange rate target zones has two main results namely that credible target zones stabilize exchange rates more than fundamentals the honeymoon effect and that exchange rates depend on fundamentals according to a nonlinear s curve with smooth pasting almost all the model s empirical implications have been overwhelmingly rejected later research has reconciled the theory with empirical results by allowing for imperfectly credible exchange rates and for intra marginal central bank interventions that research has also shown that non linearities and smooth pasting are probably empirically insignificant and that a linear managed float model is a good approximation to exchange rate target zones the speculative attack

literature has developed models built on the principles of no anticipated price discontinuities endogenous timing of the speculative attack and the attack occurring when a finite amount of foreign exchange reserves remain these models have been extended to include random timing of attacks and alternative post attack regimes some empirical tests have been undertaken in contrast to target zone models speculative attack models have been influenced by empirical results only to a small extent
