Paul Wang's Java with Object Oriented Programming eases students into an understanding of the object oriented paradigm from the very first page just as he does in Java with Object Oriented Programming with Worldwide Web Applications on which this new book is modeled after the early chapters that present classes and Java features and constructs. Wang introduces new object oriented concepts throughout the book while clearly showing how Java addresses these issues. He also goes the extra step of including case studies to illustrate how Java and object oriented programming are applied early in the book. Wang introduces students to a case study involving a pocket calculator. This case study is revisited throughout the book as students learn new aspects of object oriented programming and the Java language. The book then concludes with a chapter on some of the processes associated with object oriented design. As a result, students are able to fully grasp the concepts they learn.
