today our world increasingly is conceived of as being molecular an ever widening range of phenomena are described logically in terms of molecular properties and molecular interactions the majority of known molecules are heterocyclic and heterocycles dominate the fields of biochemistry medicinal chemistry dyestuffs photographic science and are of increasing importance in many others including polymers adhesives and molecular engineering thus the importance of heterocyclic chemistry continues to increase and this three volume work by drs r r gupta mahendra kumar and vandana gupta is a welcome addition to the available guides on the subject its scope places it in a useful niche between the single volume texts and monographs of heterocyclic chemistry and the multivolume treatises the authors have retained the well tried classical approach but have succeeded in placing their own individual spin on their arrangement they have put together a well

selected range from among the most important of the vast array of facts available this factual material is ordered in a clear and logical fashion over the three volumes the present work should be of great value to students and practitioners of heterocyclic chemistry at all levels from the advanced undergraduate upwards it will be of particular assistance in presenting a clear and modern view of the subject to those who use heterocycles in a variety of other fields and we wish it well
