this volume moves chemical instruments and experiments into the foreground of historical concern in line with the emphasis on practice that characterizes current work on other fields of science and engineering

a weekly record of scientific progress

meet the makers of science discover the fascinating achievements of the world s greatest scientists past and present

this lively collection looks at science as filtered through literature film and television it discusses classic works in science fiction and

provides an in depth look at the chemistry depicted in popular culture particularly in star trek star wars and doctor who it includes an examination by nebula award winner connie willis of how science fiction authors use science and reprints two tongue in cheek short stories by isaac asimov the book also includes suggestions for using science fiction as an educational resource

here is a fascinating reader friendly exploration of the phosphorus enigma the volume attempts to answer the questions how did phosphorus atoms which are produced inside the inner cores of a handful of huge stars become concentrated in relatively high proportions in the organisms composing earth s biosphere and how did these phosphate derivatives manage to be included in such a great variety of organic molecules playing essential biochemical roles in all known life forms due to the interdisciplinary nature of the topic the volume is arranged in three sections the first section introduces the fundamental concepts and notions of physics chemistry and biology necessary for the proper understanding of the topics discussed within an astronomical framework the author then focuses on the role of phosphorus and its compounds within the context of chemical evolution in galaxies considering its relevance in most essential biochemical functions as well as its peculiar chemistry under different physicochemical conditions the third section provides an overall perspective on the role of phosphorus and its compounds in current areas of research of solid state physics materials engineering nanotechnology or medicine
