this clearly written and engrossing book presents a global narrative of the origins of the modern world from 1400 to the present unlike most studies which assume that the rise of the west is the story of the coming of the modern world this history drawing upon new scholarship on asia africa and the new world and upon the maturing field of environmental

history constructs a story in which those parts of the world play major roles including their impacts on the environment. Robert B. Marks defines the modern world as one marked by industry, the nation state, interstate warfare, a large and growing gap between the wealthiest and poorest parts of the world, increasing inequality within the wealthiest industrialized countries, and an escape from the environmental constraints of the biological old regime. He explains its origins by emphasizing contingencies such as the conquest of the new world, the broad comparability of the most advanced regions in China, India, and Europe, the reasons why England was able to escape from common ecological constraints facing all of those regions by the end of the eighteenth century, a conjuncture of human and natural forces that solidified a gap between the industrialized and non-industrialized parts of the world, the mounting environmental crisis that defines the modern world, and the ways in which the forces of globalization stress the economic and political underpinnings of the modern world. Now in a new edition that brings the saga of the modern world to the present in an environmental context, the book considers how and why the United States emerged as a world power in the twentieth century and became the sole superpower by the twenty-first century, and why the changed relationship of humans to the environment likely will be the hallmark of the modern era. The Anthropocene once again arguing that the US rise to global hegemon was contingent, not inevitable. Marks also points to the resurgence of Asia and the vastly changed relationship of humans to the environment that may in the long run overshadow any political and economic milestones of the past hundred years.

Navies in Modern World History traces the role of navies in world history from the early nineteenth century through both world wars to the onset of the twenty-first century. Lawrence Sondhaus examines the navies of Britain, France, Germany, the United States, Japan, Brazil, Chile, and the Soviet Union, demonstrating the variety of ways in which these countries have made decisive use of naval power and the challenges these navies faced when assembling equipment and stores, training sailors, and undertaking various missions, and shows in what ways the results helped change the course of modern world history. This book also deals with aircraft carrier design and naval aviation in the second half of the twentieth century and the leading role of navies and shipbuilders in key technological innovations of the nineteenth century and early twentieth, including advances in steam power, armour, guns, and torpedoes. Today technological breakthroughs are centred around naval stealth and maritime propulsion systems. Special attention is devoted to the evolving state of naval technology, showing how the relative industrial capabilities of seafaring countries have been reflected in their maritime building programmes, providing an important link between the evolution of modern national fleets and the broader history of the period.
