the ability to control balloon descent rates has been improved through use of a modified gas valve which has a range of openings the descent rates obtained with this valve are more constant than those obtainable with the standard gas valve atmospheric temperature lapse rate and other thermal and aerodynamic influences are unquantifiable factors affecting balloon vertical motion but are better compensated for when use is

made of a variable opening gas valve even with this valve slow descents on the order of 200 fpm or less will have oscillations with short periods of time when ascents and leveling off will occur author

this book provides a systematic description of fundamental knowledge application methods and management issues about the clinical application of endovascular surgery and device it is organized as the three parts part 1 introduces the development background of endovascular device and its knowledge hierarchy and gives an overview on classification structure shape and characteristics of the above device part 2 is based on a large number of clinical practices it firstly summarizes the basic operation skills and conventional methods of endovascular device and then exemplifies the application scheme of special device for complex cases part 3 discusses the management theory and methods of endovascular device in clinical application puts forward the agile supply chain management model and autonomous intelligent decision making method of device supply and cooperation management for clinical surgery and designs its managerial system and guides this book provides comprehensive and professional knowledge advanced theory and referential methods for clinical application and management of endovascular surgery and device it is a useful guide for the clinical practice in specialized study and professional training in endovascular surgery and provides the methods of neuro management and smart medical service for patients
